# Safety

Please read the following safety notices.

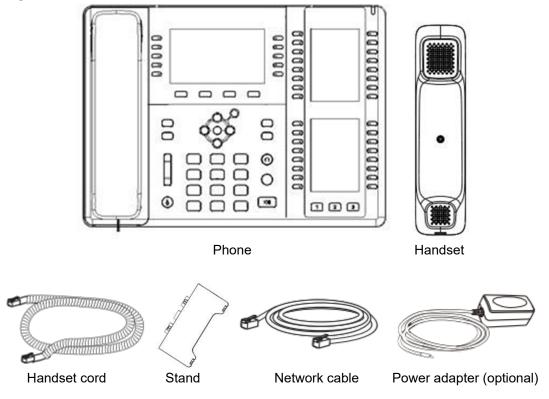

- If using a power supply, please use the power supply offered by ESI. Other power supply may cause damage to the phone, affect the behavior or induce noise.
- Verify that building power is good. Bad power may cause noise, fire or damage.
- Do not damage the power cord. If power cord or plug is damaged, it may cause fire or electric shock.
- Do not expose the phone to extreme forces such as dropping it. Rough handling can damage it.
- This phone is designed for indoor use. Do not install the phone in places where there is direct sunlight. Do not get the phone wet. Do not install the phone in a poorly ventilated area.
- Avoid exposing the phone to high temperature or below 32°F (0°C) or high humidity.
- Do not attempt to open the phone. It could be damaged or induce electric shot. It will void warranty.
- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the phone. Clean the phone with a soft cloth that has been slightly dampened in a mild soap and water solution.
- Use caution when lightening is in the area.
- Before installing equipment and cabling, be familiar with the facility and any hazards such as electrical wires in the walls.

# Overview

### Introduction

The ESI ePhoneX<sup>™</sup> Enterprise IP Phone is a high-end desktop phone with a built-in sidecar that supports up to 106 LED programmable feature keys. This phone is designed for users that handle heavy call volumes and need visibility into multiple extensions on the network.

## Packing Contents

# **Desktop Installation**

### PoE and external power adapters

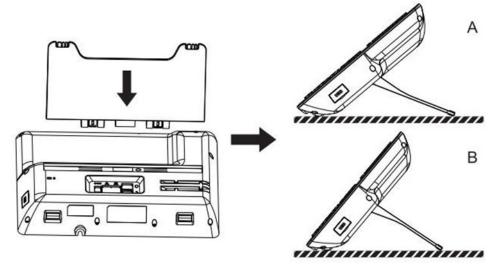

The phone can be powered up two ways, external power adapter or Power over Ethernet (PoE).

With a PoE switch, the phone is provided power through a single Ethernet cable which is also used for data.

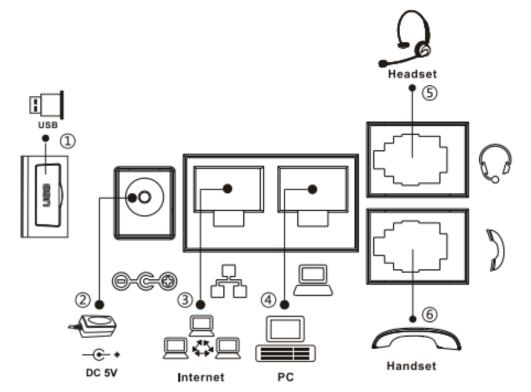

For users who do not have PoE equipment, a traditional power adaptor that plugs into a wall outlet should be used. If the phone is connected to a PoE switch and power adapter at the same time, the power adapter will be used in priority and will switch to PoE if the power adapter fails.

## Desktop installation

Follow the instructions in the image below to install the phone stand.

Connect the optional power adapter, network, PC, handset and headset to the appropriate port as shown in the below.

Index	Interface	Description
1	USB Port (on side of phone)	Connect USB Disk or USB WIFI Adapter
2	Power Port	Connect Power Adapter
3	Network Port	Connect to LAN or Internet
4	PC Port	Network pass through for Connecting Computer
5	Headset Port	Connecting Headset
6	Handset Port	Connect Handset

# **User Introduction**

Keypad

Number	Keypad Name	Description
1	Function Menu Key	These four keys provide the corresponding menu function on the screen.
2	Hold Key	Press the "Hold" key during the call, the user can hold the call, and press it again to cancel the holding and restore the normal call state.
3	Transfer Key	By pressing the "Transfer" key, the user can transfer the current call to another number.
4	Navigation and OK keys	The user can press the up/down navigation key to change the line or move the cursor in the screen list. On some Settings and text editing pages, the user can press the left/right navigation key to change options or move the cursor in the screen list to the left/right. OK key: Default is equivalent to soft button confirmation, user can customize the function.
5	Return Key	The user can return to the previous menu by pressing the return key, and the function of dialing the phone or in the call is to reject or hang up.
6	Contact Key	Press the "Contact" key, the user can enter the address book interface and select the contact person to call.
7	Voice Mail Key	Press the "voice mail" button, and the user enters the interface of SMS and voice mail list.

8	DTMF Key	These 12 standard phone keys provide standard phone button functionality. At the same time, certain long key presses can be triggered to provide special functions. Long press the # key to open the keyboard lock configuration.
9	Volume up	In the standby state, ring and ring configuration interface, press this button to increase the ring volume; Press this button to increase the volume on the call.
10	Volume down	In the standby state, ring and ring configuration interface, press this button to decrease the ring volume; Press this button to decrease the volume on the call.
11	Mute Key	During a call, the user can press this key to mute the microphone.
12	Headset Key	Users can press this key to open the headset channel
13	Redial Key	Press the Redial key to redial the last number dialed
14	Hands-free Key	The user can press this key to open the audio channel of the speakerphone.
15	Side DSS Key	Long press the side DSS key to enter the function key setting interface and set the required functions
16	DSS Shortcut Key	Long press the DSS shortcut key to enter the setting interface and set the required functions
17	Page Switch Key	Press the "page switch" key, the user can switch to the first, second and third screen function key page.

## Using Handset / Hands-free Speaker / Headset

• Using Handset

To talk over handset, lift the handset and dial the number, or dial the number first, then lift the handset and the number will be dialed.

- Using Hands-free Speaker To talk over hands-free speaker, user should press the hands-free key then dial the number, or just dial the number.
- Using Headset To use headset, press the head

To use headset, press the headset key on the phone then dial the number, or dial the number then press the headset key.

Using Line Keys (Defined by DSS Key)
 User can make or answer a call on a specific line using a DSS key that has been programmed as a handsfree key, answer key, etc.

## Idle Screen

The image above shows the default standby screen, which is the user interface most of the time.

The upper half of the home screen shows the status and information such as voice messages, missed calls, auto answer, do not disturb, lock status, network connection status, etc.

The lower half of the screen is the function menu keys, through which users can operate the phone. Users can restore the phone to the default standby screen interface by picking up and dropping the handle.

The left and right side of the screen show the side key configurations, which can be customized by the user.

## Phone Status

From the phone, press the Menu key then select Status. The phone status includes the following phone information:

- Network status: VLAN ID Network Mode IP Address
- Phone Information: Mac Address
   Phone Model
   Hardware Version number
   Software Version number
   Phone Storage (RAM and ROM)
   System Running Time
- SIP Account Information: SIP Account
   SIP Account Status (register / uncommitted / registering / time out)
- TR069 Connect Status (Displays only in the phone interface state) The user can view the phone status through the phone interface and the web interface.

To view phone status from the phone, press Menu then select Status.

## Web Management

Phone can be configured and managed from its web interface. Enter the IP address of the phone and log in. The user can find the IP address of the phone by navigating to [Menu] >> [Status] at the phone.

User:	admin
Password:	••••
Language:	English 💌 🔽

User must correctly enter the user name and password to log in to the web page. The default user name and password are "admin". For specific details on the web interface, refer to **Web Configurations** section.

## Network Configurations

The phone requires an IP network to operate. From the phone, go to [Menu] >> [Advanced] >> [Network] >> [Network].

The default password for advanced settings is 123.

**NOTICE!** If user sees WAN Disconnected' icon flashing in the middle of screen, it means the network cable is not correctly connected to the device's network port. Check that the cable is connected correctly between the phone and to the network switch.

The phone supports three types of networks; IPv4, IPv6, and IPv4&IPv6 There are three common IP configuration modes for IPv4:

- DHCP (Dynamic Host Configuration Protocol) The phone will automatically retrieve its network configuration from a DHCP server. Users do not need to configure any parameters manually. This is recommended for the most users. This is the phones default network setting.
- Static IP Configuration This option allows user to configure each IP parameters manually, including IP Address, Subnet Mask, Default Gateway, and DNS servers. This method requires network knowledge to implement.
- PPPoE This option is often used to connect the phone to a broadband modem or router. To establish a PPPoE connection, user should configure username and password provided by the service provider.

The device is default configured in DHCP mode.

There are two common IP configuration modes for IPv6

- DHCP (Dynamic Host Configuration Protocol) The phone will automatically retrieve its network configuration from a DHCP server. Users do not need to configure any parameters manually. This is recommended for the most users. This is the phones default network setting.
- Static IP Configuration This option allows user to configure each IP parameters manually, including IP Address, Subnet Mask, Default Gateway, and DNS servers. This method requires network knowledge to implement. Refer to **Network Settings** for details.

## SIP Configurations

A line must be configured properly for telephony service. When the phone line is configured, the phone will register to the service provider with the server's address and user's authentication as stored in the configurations.

The user can configure the interface at the phone or the webpage, and input the corresponding information at the registered address, registered user name, registered password, SIP user and registered port respectively, which are provided by the SIP server administrator.

• Phone interface: To manually configure a line, the user can long press a line key, or configure a line in the menu [Menu] >> [Advanced] >> [Accounts] >> [Line n] configuration. Click ok to save the configuration.

NOTICE! User must enter correct password to access Advanced settings. The default password is 123.

The parameters are shown in the picture below.

1005	12 : 49			
1. Registration		Enab	led	$\langle \rangle$

# **Basic Function**

### Making Phone Calls

#### Default Line

The device provides twenty lines of service. If two lines are configured, user can make or receive phone calls on either line. If default line is configured by user, there will be a default line for making outgoing calls indicated in the top left corner of the screen. To change the default line, user can press left/right navigator keys to switch between two lines

Enable or disable default line: From the phone, press [Menu] >> [Features] >> [General] >> [Default Line] and toggle to Enabled or Disabled. From the Web Interface go to [Phone Settings] >> [Features], and check or uncheck [Enable Default Line].

#### • Dialing Methods

User can dial a number by,

- Entering the number directly.
- Selecting a phone number from Local Contacts. Refer to Local Contacts.
- Selecting a phone number from Cloud Contacts. Refer to **Cloud Phonebook**.
- Selecting a phone number from Call Logs (Refer to Call Log.
- Press Redial to dial the last dialed number
- Dialing Number then Open Audio

To make a phone call, user can dial a number by one of the above methods. When the dialed number is completed, user can press [Dial] key on the soft-menu, or press hand-free key to turn on the speaker or headphone, or lift the handset to call out with the current line, or user can press line key (Configured by DSS Keys) to call out with specified line.

<b>(</b> ) 1003	10 : 48		
1003@SI			Voice Mail
SIP2	100	Headset	
SIP3	1000		
SIP4	1000	Record	
SIP5	1000	1 2	
Dial	Save	Delete	End

#### • Go offhook then Dial the Number

Go offhook by lifting the handset, or pressing the hands-free speaker key, or pressing the headset key, or pressing a line key, and then dial the number with one of the above methods. When number has been dialed, user can press [Dial] key or [OK] key to call out, or the number will be dialed automatically after timeout.

<b>4</b> » 1003			10 : 48
1003@Sl			Voice Mail
SIP2	100	Headset	
SIP3	1000		
SIP4	1000		Record
SIP5	1000		1 2
Dial	Save	Delete	End

#### Cancel Call

While calling the number, user can disconnect the call by placing back the handset, pressing the hands-free key or by pressing the End key.

## Answering Calls

When there is an incoming call while the device is idle, the user will see the incoming call on the screen as shown below.

<b>4</b> » 1003			11:04
1003@SI			Voice Mail
SIP2		1000 1000 ((@))	Headset
SIP3			
SIP4			Record
SIP5			1 2
Answer		Fwd	Reject

User can answer the call by lifting the handset, by pressing the headset key, by pressing the hands-free speaker key, or by pressing the Answer key. To reject the incoming call, press Reject key.

### Talking

When the call is connected, user will see a talking mode screen as the following figure.

Number	Name	Description
1	Default line	The line that is currently in use by the phone.
2	Voice channel	The voice channel mode being used (handset, handsfree, headset).
3	Current call	The call that is currently in progress.
4	Call status	Shows the calls that are on a line.
5	Call Duration	The duration of the current call.
6	Speech quality	Displays the current voice quality of the call.

### Make / Receive Second Call

The device can support up to two concurrent calls. When there is already a call established, user can still answer another incoming call on either line or make a second call on either line.

• Second Incoming Call

When there is another incoming call during a phone call, this call will be waiting for user to answer. User will see the call message in the middle of current screen. The device will not be ringing but playing call waiting tone in the audio channel of the current call and the LED will be flashing. User can accept or reject the call the same way as a normal incoming call. When the waiting call is answered, the first call will be placed on hold automatically.

<b>\$</b> 1003			12 : 18
1003@Sl			Voice Mail
SIP2	10	00.0	9 Headset
SIP3		))	
SIP4	10	Record	
SIP5		1 2	
Xfer	Answer	Reject	End

#### Second Outgoing Call

To make a second call, press Xfer or Conf key to make a new call on the default line or press the line key to make new call on specific line. Then dial the number the same way as making a phone call. Another alternative for making second call is to press DSS Key or dial out from the configured Keys (BLF/Speed Dial). When the user is making a second call with the above methods, the first call can be placed on hold manually or will be placed on hold automatically at second dial.

• Switching between Two Calls

When there are two calls established, user will see a dual calls screen as the following picture.

<b>()</b> » 1003				12 : 25
1003@SI			0	Voice Mail
SIP2	Ω	1000 1000		Headset
SIP3	0	1000	00:04	
SIP4		1002	00:04	Record
SIP5				1 2
Hold	Xfer	Confe	rence	End

Press up/down navigator keys to switch between callers. Press the Resume key to pick up the caller.

• Ending One Call

Hang up the current call by pressing the End key. The phone will return to single call mode in holding state.

## Ending the Call

End a call by hanging up the handset, pressing the hands-free key or by pressing the End key.

### Redial

- Redial the last outgoing number: When the phone is in standby mode, press the redial key and the phone will call the last outgoing number.
- Call any number with the redial key: Enter the number, press the redial key, and the phone will call the number.
- Press the redial key to view call records:

Log into the phone web page and go to [Phone Settings] >> [Features] >> [Redial Settings]. Check Redial Enter CallLog. Now user can press the Redial key to enter the call records page when the phone is idle.

Re	lial Settings >>				
	Enable Call Completion:			Enable Auto Redial:	
	Auto Redial Interval:	30	(1~180)second(s)	Auto Redial Times:	5 (1~100)
	Redial Enter CallLog:	<b>~</b>			

## Dial-up Query

Dial-up inquiry function is turned on by default. Go offhook and enter two or more numbers. The dial interface will automatically try to match the numbers dialed. Use the up/down navigation keys to select the number, press the Dial key to dial the number.

## Auto-Answering

When enabled, any incoming call will be automatically answered (not including call waiting). Autoanswering can be enabled on line by line basis.

The user can enable the automatic answer function at the phone interface or the webpage interface.

Phone interface:

While the phone is idle, press [Menu] >> [Features] >> [Auto Answer].

Scroll to a line and press OK to select the line. Use the left/right navigation keys to enable/disable auto answer, then scroll down to the next line and set the Auto Answer Delay. Default is 5 seconds. When done, press [OK] key to save.

The icon in the upper right corner of the screen A indicates that auto answer is enabled.

## Callback

A Callback key, like the Redial key, will dial back the number of the last call. If there is no call history, pressing the Callback key will result with the message "can't process".

• Set the callback key through the phone interface:

From the phone, press [Menu] >> [Basic] >> [Keyboard] >> [DSS Key Settings, or Soft DSS Key Settings]. Select the function key to program, set key Type to Key Event, set key to Call Back, enter the key name and press OK to save.

Dsskey			16 : 14
1. Side Dsskey	1-8		$\langle \rangle$
2. Type	Key E	Event	$\diamond$
3. Key	Call E	Back	$\langle \rangle$
4. Name			
5. Dss Theme	Gree	n	$\langle \rangle$
Return I	Left	Right	ОК

 Set the callback key through the web interface: Log in to the phone web page. Go to [Function Key] >> [Side Key] or [Softkey]. Select a function key to program, set the type as Key Event, and set the subtype as the Call Back, as shown below:

	Page1					Delete Add	New Page

## Mute

Press the mute key during a call to disable the microphone so that the local voice is not heard. Normally, mute mode is automatically turned off at the end of a call. User can also press mute to silence the ringtone when there is an incoming call.

Mute mode can be enabled in all call modes (handset, headset or hands-free).

#### Mute the Call

During the conversation, press the mute key an the phone. A red mute icon is displayed on the phone screen, as shown in the figure below:

• Cancel mute: Press Mute key 🖞 again to turn off mute. The red mute icon will no longer be displayed on the call screen.

#### **Ringing Mute**

• Mute: Press the mute key  $rac{W}{W}$  when the phone is in standby mode:

The top right corner of the phone will show a mute speaker icon . The status lamp in upper right corner of phone will blink red when there is an incoming call. The phone will display the incoming call but will not ring.

 Cancel ring tone mute: On the standby or incoming call screen, press the mute key again to cancel ring tone mute. The mute speaker icon will no longer show in upper right corner and the phone will ring as normal when there is an incoming call.

## Call Hold/Resume

Press the Hold key to put a call on hold. The Hold key will change to a Resume key. Press the Resume key to retrieve the call.

## DND

User can enable Do-Not-Disturb (DND) feature on the phone to reject incoming calls (including call waiting). DND can be enabled on a line by line basis.

Enable/Disable DND for all lines and all calls :

- From the phone:
  - o Press DND key to enable the DND. All calls will go to voicemail.
  - Press DND key again to disable DND. All calls will ring to the phone.

Enable/disable Do Not Disturb on a specific line:

- From the phone menu:
  - Press [Menu] >> [Features] >> [DND].
  - Use the left/right navigation keys to select Line, and then use the navigation keys to scroll down to Line and select which line to place into DND. Press [OK] to save.

The user will see the DND icon turn red, and the sip-line will be in DND.

## Call Forward

Call forward diverts an incoming call to a specific number based on conditions and configurations. User can configure the call forward settings of each line.

There are three types of Call Forwarding,

- Unconditional Forward any incoming call to the configured number.
- Busy Forward Forward incoming call when user is on phone.
- No Answer Forward incoming call if user does not answer within a configured delay time.

Phone interface: Default standby mode:

 Press [Menu] >> [Features] >> [Call Forward], select a line using up/down navigation keys and press OK.

Call Forward			10:09
1. 4225			
2. SIP2			
3. SIP3			
4. SIP4			
5. SIP5			
Return	Up	Down	ОК

• Select the call forward type by pressing the up/down navigation keys and press [OK].

4225			10:09
1. Uncondition	onal		_
2. Busy Forw	vard		
3. No Answe	r		
Return	Up	Down	ОК

• Select enable/disable by pressing the left/right navigation keys.

Unconditional			15 : 10
1. Unconditional	Enab	led	$\langle \rangle$
2. Forward to

## Call Transfer

When the user is talking with a remote party and wishes to transfer the call to another remote party, there are three way to transfer the call, blind transfer, attended transfer and Semi-Attended transfer.

- Blind transfer: No need to negotiate with the other side, directly transfer the call to the other side.
- Semi-Attended transfer: When you hear the ring back, transfer the call to the other party.
- Attended transfer: When the caller answers the call, transfer the call to the other party. For more transfer settings, refer to <u>Line >> Dial Plan</u>.

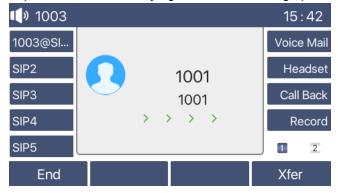

#### Blind transfer

During a call, press Transfer key or Xfer soft key on the phone, enter the number to transfer to, press the Transfer key again *k* and hang up.

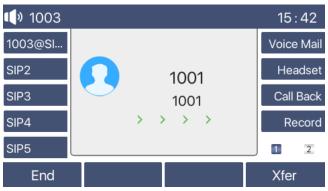

### Semi-Attended transfer

During the call, press the Transfer key is or Xfer soft key on the phone, enter the number to transfer to. When ringback is heard, press the Transfer key again is and hang up.

#### Attended transfer

Attended transfer is also known as "courtesy mode", which is to transfer the call by calling the other party and waiting for the other party to answer the call then announcing that a call will be transferred to them. While on a call, press the Transfer key, wait for the other party to answer, announce the call then hang up.

### Transfer to Voicemail (ePhoneX-1 only)

To transfer a call directly into another person's voicemail box, press the Trsf VM key, dial the destination or press the DSS key, and while hearing the VM greeting press Transfer to complete the transfer.

🔇 Matt Jo	2:24 PM

## Call Waiting

- Enable call waiting: new calls can be accepted during a call.
- Disable call waiting: new calls will be automatically rejected and a busy tone will play.
- Enable call waiting tone: when a new call is received while on a call, user will hear a beep, which indicates an incoming call.

The user can enable/disable the call waiting at the phone interface and the web interface.

• Phone interface: Press [Menu] >> [Features] >> [Call waiting] >> [Call Waiting Settings]. Use navigation keys to enable Call Waiting and Waiting Tone.

• WEB interface: Enter [Phone Settings] >> [Features] >> [Basic Settings], enable/disable call waiting.

sic Settings >>

## Conference

#### **Local Conference**

To conduct local conference, log in the webpage and enter [Line] >> [SIP] >> [Basic settings]. The conference type is set as local (the default is local mode), as shown in the figure:

Basi	c Settings >>			
	Enable Auto Answering:		Auto Answering Delay:	5 (0~120)second(s)
	Call Forward Unconditional:		Call Forward Number for Unconditional:	
	Call Forward on Busy:		Call Forward Number for Busy:	
	Call Forward on No Answer:		Call Forward Number for No Answer:	
	Call Forward Delay for No Answer:	5 (0~120)second(s)	Transfer Timeout:	0 second(s)
	Conference Type:	Local 💌	Server Conference Number:	

Two ways to create a local conference:

- Dial a number or select it from Contacts and wait for called party to pick up.
- When call is established, press the Conference key and dial the next number to add to the conference.
- When call is answered, press Conference key again and all three parties will be connected to the conference.

<b>4</b> » 1003		16 : 46	<b>1</b> 003		16 : 46
1003@SI	0	Voice Mail	1003@Sl Conf(2)	00:08	Voice Mail

SIP4	1001 00.20	Record	SIP4		Record
SIP5		1 2	SIP5		1 2
Hold	Xfer Conference	End	Hold	Split	End

**Note**: During the conference, press the Split soft key to split the conference. Use the up/down Navigation keys to toggle between the two conference members, User can put users on hold or press End to end the call with one of the conference members.

#### **Network Conference**

Users need server support for network conference.

Log in the web page, enter [Line] >> [SIP] >> [Basic settings], set the conference type as server mode (default is local mode), set the server conference room number (consult your system administrator), as shown in the figure:

Bas	ic Settings >>			
	Enable Auto Answering:		Auto Answering Delay:	5 (0~120)second(s)
	Call Forward Unconditional:		Call Forward Number for Unconditional:	
	Call Forward on Busy:		Call Forward Number for Busy:	
	Call Forward on No Answer:		Call Forward Number for No Answer:	
	Call Forward Delay for No Answer:	5 (0~120)second(	s) Transfer Timeout:	0 second(s)
	Conference Type:	Server 💌	Server Conference Number:	1234

Method to join a network conference:

- Call number of network conference room, enter the password then all enter the conference room.
- Two phones have established common calls. Press the conference key to invite new members to the conference. Follow the voice prompt to operate.

**Note**: The upper limit of the number of participants in the network conference varies according to the server.

### Call Park

Call Park requires server support. Consult system administrator for support. While on a call, if it is not convenient to answer an incoming call, press the configured park key to hold the call. After a successful park, user can resume the call by pressing the configured park key.

Set the call park button:

Phone interface: long press a function key to enter the function key Settings interface, or go to [Menu]
 >> [Basic] >> [Keyboard], select and enter a key category (DSS key, Soft DSS key). Set the key function type as Memory Key and subtypes as Call Park, enter server call park number, set up corresponding SIP lines.

# Pick Up

Pick Up requires server support. Consult system administrator for support.

A user can use the Pick Up function to answer incoming calls from other users. The phone can pick up incoming calls by configuring DSSkey for BLF and setting the Pick Up code.

Phone interface: press [Menu] >> [Basic] >> [Keyboard] >> [DSS Key Settings], select the function key to configure.

- Set the line, function key type as Memory Key, subtype as BLF/NEW CALL, set subscribed Telephone number, and pickup Number code.
- A call comes in to the Telephone number that is in the subscribed to the pickup number and the phone rings.
- Press the DSS key to pick up the call.

	number.	with the subscribed number.
	Press the BLF key while on	When this BLF key is pressed while talking to
BLF/BXFER	standby to dial the subscriber	another user, you blind transfer the call to the
	number.	subscribed number.
	Press the BLF key while on	When this BLF key is pressed while talking to
BLF/AXFER	standby to dial the subscriber	another user, you attendance transfer the call
	number.	to the subscribed number.
	Press the BLF key while on	When this BLF key is pressed while talking to
BLF/Conference	standby to dial the subscriber	another user, you invite the subscriber
	number.	number to join the meeting.
	Press the BLF key while on	When this BLF key is pressed while talking to
BLF/DTMF	standby to dial the subscriber	another user, the phone automatically sends
	number.	the DTMF that corresponds to the BLF key
		number.

## Use the BLF Function

BLF, also known as a "busy lamp field," notifies the user of the status of the subscribed object and is used by the server to pick up the call. BLF helps you monitor the other person's status (idle, ringing, talking, off).

BLF function:

- Monitor the status of subscribed phones.
   When the subscription state of the number is changed (idle, ringing, talking), the function key LED status will have a corresponding change. Refer to LED Definition for LED states and meanings.
- Call the subscribed number. When the phone is in standby mode, press the configured BLF key to call out the subscribed number.
- Transfer calls to the subscribed number.
   The BLF key can be used for blind rotation, attention-rotation and semi-attention-rotation of the current call, and can also invite the subscribed number to join the call and send DTMF, etc. Refer to BLF function key table.
- Pickup incoming calls from subscribed number. When the subscription number telephone rings, the BLF LED.will turn red. At this point, press the BLF key to answer the incoming call from the subscribed number. Refer to **BLF LED** table.

# BLF List

BLF List Key puts the number to be subscribed into a group on the server side, and the phone uses the URL of this group for unified subscription. The specific information, number, name and status of each number can be resolved based on the notify sent from the server. A Memory Key is then set as the BLF List Key. If the state of the subscription object changes later, the corresponding led light state will change. Configure BLF List function: log in the phone page, enter the [Line] >> [SIP] >> [Advanced settings] page, open the BLF List, and configure the BLF List number.

Enable Session Timer:		Session Timeout:	0 second(
Enable BLF List:		BLF List Number:	
Response Single Codec:		BLF Server:	
Keep Alive Type:	UDP 💌	Keep Alive Interval:	15 second(
Keep Authentication:		Blocking Anonymous Call:	
RTP Encryption(SRTP):	Disabled		

Use the BLF List function: when the configuration is completed, the phone will automatically subscribe to the contents of the BLF List group. Users can monitor, call and transfer the corresponding number by pressing the BLF List key.

# Record

The device supports recording during a call.

### Local Recording (USB flash drive required)

When using local recording, it is necessary to configure recording on the phone web page.

- Begin by inserting a USB drive into the USB port on the phone.
- Web interface: Go to [Application] >> [Manage recording].
- Select Recording Type as Local.
- Set which Voice Codec to use.
- Click Apply.

Record Setting Enable Record: Record Type: Voice Codec:	✓ Local G729 ▼	×			
Recording List		Apply			
	Index	File	Name	File Size	
				De	lete

• Go to [Function Key] >> [Side Key or Softkey] and configure a key Type as Key Event and Subtype as Record.

Local recording steps:

- Make a call and press the key that was configured as a record key.
- End the recording by pressing the record key again or by hanging up.

#### View local recording from the phone:

From the Phone:

- Select [Menu] >> [Application] >> [USB] >> [Browse Audio].
- You will see a list of recordings. From here you can select a recording using the Navigation up/down keys and press Play.

From the phone web page:

- Enter [Application] >> [Manage Recording].
- View the recording file. From here you can delete the recording file by selecting it and clicking Delete.

Listen to the record :

- Select [Menu] >> [Application] >> [USB] >> [Browse Audio].
- You will see a list of recordings. Select a recording using the Navigation up/down keys and press Play.

### **Server Recording**

When using the network server to record, go to phone web page and navigate to [Application] >> [Manage recording]. Select Type as Network, select a Voice Codec, enter Server Address and Server port as shown in the image below:

Reco	ord Setting					
	Enable Record: Record Type: Voice Codec: Server Address:	✓       Network       PCMU       0.0.0.0	▼ Apply	Server Port:	10000	
Reco	ording List	Index		File Name	Fi	ile Size
						Delete

### **SIP INFO Record**

Register the phone with a server that supports SIP INFO recording. After registering the account, go to [Application] >> [Manage recording], check Enable Record, set Record Type to SIP INFO and click Apply.

Reco	ord Setting								
	Enable Record: Record Type:	Sip Info	▼ Apply						
Reco	Recording List								
		Index		File Name		File Size			
						Delete			

# Agent

When multiple people use a phone for Agent services at different times, they can quickly register their SIP account on the same server. The Agent functions of the phone can be divided into Normal and Hotel Guest. The Hotel Guest mode requires server support.

#### Normal Mode:

To configure agent function from the phone, go to [Menu] >> [Features] >> [Agent]. The password to enter the agent page is default 123.

The SIP server needs to be configured before the account can be configured.

Return

Parameter	Description		
Normal	· ·		
Number	Set the proxy account number.		
User	Set the proxy account number to verify the user name.		
Password	Set the proxy account number to verify the password.		
Line	Select the SIP line.		
CallLog	Users can choose to save all or delete all.		
Hotel Guest			
Number	Set the proxy account number.		
Password	Set the proxy account number to verify the password.		
Line	Select the SIP line.		
CallLog	Users can choose to save all or delete all.		

Delete

Logon

123

Using agent functions:

- When the phone has been configured on SIP server, enter the correct number, user name, password, click Login and the phone will register to the SIP server.
- After registration, click Logout and the phone will delete the user name and password and log out of the SIP account.
- Click Unregister, the phone will retain the user name and password and log out of the SIP account.

## Intercom

When Intercom is enabled, phone will automatically connect to incoming calls through the hands free speaker.

Phone interface:

- Press [Menu] >> [Features] >> [Intercom].
- Enable all Intercom settings that apply by using the left/right navigation keys to toggle each selection from Disabled to Enabled.

Web interface:

- Set up Intercom on all applicable phones by going to [Phone Settings] >> [Intercom Settings] and check all applicable intercom settings and click Apply
- Go to [Function Key] and configure a key. Set type as Key Event and subtype as Intercom.

Press the intercom key and dial another extension that has intercom enabled. The other extension will play a barge in tone and connect automatically.

Note that the extension that you are barging into must have intercom enabled.

Intercom Settings >>					
Enable Intercom:		Enable Intercom Mute:			
Enable Intercom Tone:		Enable Intercom Barge:			

Parameter	Description
Enable Intercom	When intercom is enabled, the device will accept the incoming call request with a SIP
	header of Alert-Info instruction to automatically answer the call after specific delay.
Enable Intercom	Enable mute mode during the intercom call
Mute	
Enable Intercom	If the incoming call is intercom call, the phone plays the intercom tone
Tone	In the incoming call is intercom call, the phone plays the intercom tone
Enable Intercom	The phone auto answers the intercom call during a call. If the current call is intercom
Barge	call, the phone will reject the second intercom call

# MCAST

The multicast feature allows user to make a broadcast call to people who are in a multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. You can also configure the phone to receive an RTP stream from a pre-configured multicast listening address without involving SIP signaling. Up to 10 multicast listening addresses can be entered.

Auto Exit Expires: 60 Apply				Apply				
Apply	MC/	ST Dynamic						
Index Priority MCAST Ip Port		Auto Exit Expires:						
		Index	Priority	MCAST Ip		Port		

Parameters	Description
Priority	Define the priority of the active call, 1 is the highest priority, 10 is the lowest.
Enable Page Priority	The voice call in progress shall take precedence over all incoming paging calls.
Name	Listened multicast server name
Host:port	Listened multicast server's multicast IP address and port.

To set up a function key for multicast:

- Log into phone web interface.
- Go to [Function Key] >> [Side Key or Softkey], select MCAST Paging or MCAST Listening, set the multicast address Value, and select the codec.
- Click Apply.
- Go to [Phone Settings] >> [MCAST] and set the Name, Host:port of the receiving multicast.
- From the phone, press the DSS key that was set as a Multicast key.
- Receive end will receive multicast call and play multicast automatically.

# SCA (Shared Call Appearance)

SCA function requires server support.

- Configuring the phone
  - When registering with the BroadSoft server, the phone can register the account created previously on multiple terminals. To configure the phone from the web page, go to [Line] >> [SIP] and enter Register Settings information and SIP Server 1 information.

	Registered	Activate:	
Username:	123	Authentication User:	123
Display name:	123	Authentication Password:	***
Realm:		Server Name:	
Server Port:	5060	Server Port:	5060
Server Address:	172.16.1.2	Server Address:	5050
	UDP -		UDP -
Transport Protocol:		Transport Protocol:	
Registration Expiration:	3600 second(s)	Registration Expiration:	3600 second
		De las Deve General de las	
Proxy Server Address:		Backup Proxy Server Address:	
	5060	Backup Proxy Server Address: Backup Proxy Server Port:	5060
Proxy Server Address: Proxy Server Port: Proxy User:	5060		5060

After the phone registers with the BroadSoft server, a server type needs to be set. Specifically, log in to the webpage of the phone, choose [Line] >> [SIP] >> [Advanced Settings] and set Specific Server Type to BroadSoft, as shown in the following figure.

SIP Encryption:		RTP Encryption(SRTP):	Disabled 🚽 🕜
Enable Session Timer:		Session Timeout:	0 second(s) 🕐
Enable BLF List:		BLF List Number:	
Response Single Codec:		BLF Server:	2

After an account is configured and successfully registered, you can configure lines whose DSS Key is Shared Call Appearance on the Function Key page to facilitate viewing the call status of the group. Each line key represents a call appearance. Understand the call status by referring to **LED DEFINITION** table. To facilitate private hold, configure keys whose DSS Key is Private Hold on the Function Key page. Pay attention that the public hold key is the softkey-hold key during a call.

Function Key Settings

	Dsskey Transfer	Mode Make a	a New C 🔻	Dsskey Home I Apply	Page: None ▼			
	Page1 Page2	2				Delete A	dd New Page	
Кеу	Туре	Name	Value	Subtype	Line	Media	PickUp Number	Icon Color
DSS Key 1	Key Event 🔻			Private Hold 🔻	8325@SIP1 🔻	DEFAULT V		Default Green 🔻
DSS Key 2	None 🔻			None <b>v</b>	AUTO 🔻	DEFAULT V		Default Green 🔻
DSS Key 3	None 🔻			None 🔻	AUTO 🔻	DEFAULT V		Default Green 🔻
DSS Key 4	None 🔻			None <b>v</b>	AUTO 🔻	DEFAULT V		Default Green 🔻

- Each phone registered with the BroadSoft server should be configured as above, then the SCA function can be used.
- LED Status

To facilitate viewing the call status of a group, configure the DSS Key as SCA. The following table describes the line LEDs in different states.

LED State& Call Direction	Local	Remote
Idle	Off	Off
Seized	Steady green	Steady red
Progressing (outgoing call)	Steady green	Steady red
Alerting (incoming call)	Fast blinking green	Fast blinking green
Active	Steady green	Steady red
Public Held (hold)	Slow blinking green	Slow blinking red
Held-private (private hold)	Slow blinking yellow	Steady red
Bridge-active (Barge-in)	Steady green	Steady red
Bridge-held	Steady green	Steady red

#### • Shared Call Appearance(SCA)

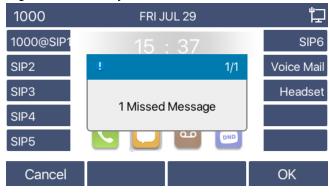

See the following scenarios to help facilitate understanding of the feature. In the following scenarios, the manager and secretary are registered to the same SCA account.

- Scenario 1: When this account receives an incoming call, the phones of both the manager and the secretary will receive the call and ring. If the manager is busy, the manager can reject the call and the manager's phone stops ringing but the secretary's phone keeps ringing until the secretary rejects/answers the call or the call times out.
- Scenario 2: When this account receives an incoming call, if the secretary answers the call first and the manager is required to answer the call, the secretary can press the Public Hold key to hold this call and notify the manager. The manager can press the line key corresponding to the Shared Call Appearance to answer the call.
- Scenario 3: The manager is on an important call with a customer and needs to leave their office for a moment. If the manager does not want others to retrieve this call, the manager can press the Private Hold key.
- Scenario 4: The manager is in a call with a customer and requires the secretary to join the call to take notes. The secretary can press the corresponding SCA line key to barge into this call.

# Message

## SMS (Short Message Service)

If the service of the line supports SMS, when the other end sends a text message to the number, the user will receive the SMS message on the standby screen.

Send messages:

- From the phone, go to [Menu] >> [Message] >> [SMS].
- Select New Message
- Type a message using the keypad, press Send, then enter a "To" number and press OK or Send.
- Select From. Select To. Press OK.

#### View SMS:

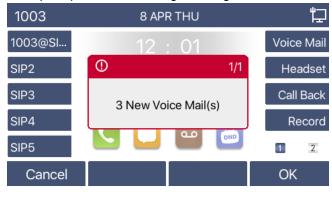

- Press OK to clear Missed Message popup then press View to view the message.
- Alternately, from the phone, go to [Menu] >> [Message] >> [SMS].
- Use the up/down navigation keys to select Inbox.
- Press OK to enter the SMS inbox interface.
- Select the unread message and press [OK] or [View] to read the unread message.

#### Reply to SMS:

- Use the navigation keys to select the message.
- Press [OK] or [View] to view the message.
- Press the [Reply] key, type your reply and click Send.

### MWI (Message Waiting Indicator)

If the line service supports voice message feature, when the user is not available to answer the call, the caller can leave a voice message on the server to the user. User will receive voice message notification from the server and device will prompt a voice message waiting icon on the standby screen.

The Voice message icon and the home screen will also show the number of messages missed.

To enable Voice Mail:

- From the phone, navigate to Menu > Messages > Voice Messages.
- Use the up/down navigation keys to select the appropriate line and press Edit.
- Use the left/right navigation keys to toggle Voice Mail from Disabled to Enabled.
- Enter the code that will allow the phone to access the server voicemail.
- Press OK to save.

Voice Mess	age		12 : 20	
1. 1003 (3	3/5)			
2. SIP2 (0/0)				
3. SIP3 (0	/0)			
4. SIP4 (0/0)				
5. SIP5 (0	/0)			
Return	Edit		Play	

1003	12 : 21			
1. Voice Mail	Enak	bled	<>	
2. Number	*2	*2		
Return	123	Delete	OK	

To listen to a voice message:

- Press the Voice Mail key and enter voicemail password when prompted.
- Alternately, navigate to Menu > Messages > Voice Messages.
- Use the up/down navigation keys to select the line and press Play.
- In the following picture, the 3 in (3/5) represents new voice messages, and 5 represents the total number of voice messages.

1	Voice Messa	ige	12 : 20
	1. 1003 (3/	5)	
	2. SIP2 (0/0	))	
	3. SIP3 (0/0	))	
	4. SIP4 (0/0	))	
	5. SIP5 (0/0	))	
	Return	Edit	Play

# SIP Hotspot

SIP accounts can be expanded using SIP hotspot is a simple but practical function that can implement group ringing.

Call example: Phone (A) is set up as a Hotspot and phones (B) and (C) are set up as clients. When someone calls phone (A), phones (A), (B), and (C) all ring. When any phone answers the call, other phones stop ringing. The call can be answered by only one phone. When phone (B) or (C) initiates a call, the SIP number registered to phone (A) is the calling number.

To create a SIP hotspot, at least one SIP account must be configured and registered before proceeding. To create a SIP account from the web interface, go to [Line] >> [SIP] and fill in the appropriate information.

› Device Log	Proxy Password:					

There are two hotspot modes, Client and Hotspot.

- If your phone is set up as a "Hotspot", the device table will display as Client Table, devices that can connect to your phone.
- If your phone is set up as a "Client", the device table will display as Hotspot Table, devices to which your phone can connect.

Parameters	Description
Enable hotspot Set it to Enabled to enable the feature.	
Mode Choose whether the phone will be a hotspot client or server."	
Monitor Type	Choose Broadcast or Multicast. If you want to limit the broadcast packets, use
Monitor Type	Broadcast. If client chooses Broadcast, the SIP hotspot phone must be broadcast.
Monitor Address	This is the address of broadcast. Hotspot server and hotspot client must be the
Monitor Address	same.
Local Port	This is the port number used for access.

#### SIP hotspot server:

As the hotspot server, the default extension number is 0. When the phone is used as the client, the extension number is increased from 1, you can view the extension number through the [SIP Hotspot] page.

• The hotspot server and the client can dial each other through the extension number. Example: extension 1 dials extension 0.

## Screen

The user can set the phone screen parameters through both the phone interface and web interface.

• Phone interface: When the phone is in the default standby state, go to [Menu] >> [Basic] >> [Screen] to edit the screen parameters. After editing, click [OK] to save, as shown in the figure:

Screen Setting		16 : 39			
1. :klight Active Level	12	<>			
2. Backlight Inactive	4	$\diamond$			
3. Backlight Time	45	$\langle \rangle$			
4. Screensaver	Disabled	$\diamond$			
Return Left	Right	ОК			

• Web interface: Go to [Phone Settings] >> [Advanced]. Edit the screen parameters, and click Apply to save.

Screen Configuration	
Backlight Active Level:	12 (1~16)
Backlight Inactive Level:	4 (0~16)
Backlight Time:	45 (0~120)second(s)
Screensaver	Disabled 💌
	Apply

- Backlight Active Level: Set the Backlight Active Level (brightness) from 1 to 16. Use navigation keys
  [<] or [>] to adjust brightness level.
- Backlight Inactive Level: Set the Backlight Inactive Level (idle brightness) from 0 to 16. Use Navigation keys [<] or [>] adjust brightness level.
- Backlight Timer: Set the Backlight Timer. Timer range is Always On, Custom, 15 seconds, 30 seconds, 1 minute, 2 minutes, 5 minutes, 10 minutes, 30 minutes, 1 hour, 2 hours, 3 hours, 6 hours, 15 hours.
- Screensaver: The screen saver can be Enable and Disabled: Enabled by default.
- Web interface: Enter [Phone Settings] >> [Advanced], edit screen parameters, and click submit to save.

## Ring

When the phone is in the default standby mode,

- Press [Menu] >> [Basic] >> [Ring].
- Adjust [Headset] or [Handsfree] ring volume using the left / right navigation keys and press [OK] to save.
- Scroll to [Ring type], press left / right navigation keys to change the ring.
- Press [OK] to save.

## **Voice Volume**

When the phone is in the default standby mode,

- Press [Menu] >> [Basic] >> [Voice Volume].
- Adjust Handset, Headset and Handsfree volume with the left / right navigator keys.
- Press OK to save.

#### **Greeting Words**

When the phone is in the default standby mode,

- Press [Menu] >> [Basic] >> [Greeting Words].
- Press [OK] to edit the Greetings Words.
- Press OK to save.

**NOTICE!** The welcome message can only be displayed in the upper left corner of the standby screen when this option is disabled.

#### Reboot

When the phone is in the default standby mode,

- Press [MENU] >> [BASIC] >> [Reboot System].
- Press [OK]. A prompt message will read, "Reboot Now?"
- Press [OK] to reboot the phone or [Cancel].

# Phone Book

#### **Local Contact**

User can save contact information in the phonebook and dial contact phone numbers from the phonebook. To open the phone book, press Contacts key m or Contact soft key while phone is idle. By default the phonebook is empty. User can add contacts to the phone book manually or from call logs.

When there are contact records in the phone book, the contact records will be arranged in alphabetical order. User may browse the contacts with up/down navigator keys. User may check the contact information by pressing [OK] key.

#### Add / Edit / Delete Contact

To add a new contact, press contacts key, Local Contacts, All Contacts, then press [Add] key to enter the Add Contacts screen and enter the contact information as shown below,

- Contact Name
- Tel. Number
- Mobile Number
- Other Number
- Line
- Ring Tone
- Contact Group
- Photo

Add Contact	S		16 : 41
1. Name	I		
2. Office Num	nber		
3. Mobile			
4. Other Num	ber		
5. Line	Auto	1	$\Diamond$
Return	Abc	Delete	OK

Edit a contact by selecting the contact then pressing [Option] >> [Edit].

To delete a contact, select the contact to be deleted, press [Option] >> [Delete] and confirm with [OK].

#### Add / Edit / Delete Group

User can create groups, edit the group name, add or remove contacts in the group, and delete a group.

- To add a group, press [Contact] >> [Local Contacts] >> [Add Group].
- To delete a group, press [Option] >> [Delete].
- To edit a group, press [Edit].
- The Number behind the group name means the total number of contacts within a group.

Local Conta	cts		16 : 42
1. All Conta	cts (2)		
2. A (0)			
Return	Search	Add Group	OK

#### Browse and Add / Remove Contacts in Group

User can browse contacts in a group pressing the Contacts key or Contact soft key.

When user is browsing contacts of a group, user can also add contacts to that group by pressing [Add] then pressing [OK] button to save the contact. The contact will also be added to the local phonebook. User can delete contact from group by selecting [Option] >> [Delete].

Add Contacts			16 : 44
1. Name			
2. Office Number			
3. Mobile			
4. Other Number			
5. Line	Auto		$\langle \rangle$
Return	Abc	Delete	OK

#### **Blocked List**

A number added to the Blocked List will be automatically rejected. User can still call a block listed Number.

Phone interface: There are multiple ways to add a number to the Blocked List.

- Option 1: A number can be added by going to [Menu] >> [PhoneBook] >> [Black list] >> [Add].
- Option 2: Select a number from the phone book (both local and network), press Options, then select Add to Black List.
- Option 3::Select any number in the call log then press Options, then select Add to Black List.

В	Black list

	Return	Option	Add	Dial	

Web interface: There are various ways to add number to the Blocked List on web page.

- Option 1: Go to [Phonebook] >> [Call list] >> [Restricted Incoming Calls] and Click Add.
- Option 2: Go to [Phonebook] >> [Contacts]. Select any number in the phone book (both local and network) then click Add to Blacklist.
- Option 3: Go to [Call logs]. Select any number in the call log and Click Add to Blacklist.

Restricted Incoming Calls	Add	Delete Delete All
	Caller Number	Line
	123	ALL
	135	ALL

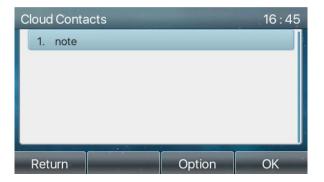

### Cloud Phone Book

#### **Configure Cloud Phone book**

Cloud phonebook allows user to download a phonebook from a cloud server. This method ensures that all office personnel are using a phonebook from a single source and saves the effort of creating and maintaining individual contact lists.

**NOTICE!** The cloud phonebook is ONLY temporarily downloaded to the phone each time it is opened to ensure the user gets the latest phonebook. However, downloading may take a couple seconds depending on network conditions. Therefore, it is highly recommended that important contacts are stored locally to the phone to save download time.

Phone interface: Press [Menu] >> [PhoneBook] >> [Cloud Contacts].

#### **Downloading Cloud Phone book**

In cloud phone book screen, open a cloud phone book by pressing [OK]. The phone will start downloading the phone book. The user will be prompted with a warning message if the download fails. Once the cloud phone book is downloaded completely, the user can browse the contact list and dial the contact number the same as in the local phonebook.

# Call Log

The phone stores call records.

- Press [CallLog] to open the call record to view all incoming calls, outgoing calls and missed calls.
- Browse the call logs with up/down navigation keys.
  - Each call log record shows the call type, call party number and name'. User can view call log details by pressing [OK], dial the number by pressing [Dial], or add the call log number to phonebook with pressing [Option] >> [Add to Contacts].
  - Delete a call log by pressing [Delete] and clear all call logs by pressing [Delete All].

User can also add the user-defined title for the DSS Keys, which are configured as Memory Key / Line / URL / Multicast.

For more information refer to **Function Key** and **LED Definition**.

## Wi-Fi

The ePhoneX supports Wi-Fi and requires the use of an ESI USB Wi-Fi adapter. Your Wi-Fi router must be configured to broadcast SSID for ePhoneX to detect Wi-Fi network.

# Steps:

- Power up ePhoneX.
- Remove rubber USB plug from right side of phone to reveal the USB port.
- Plug in WIFI dongle (Be aware that, when you plug in the WIFI dongle, the phone will release the wired LAN IP address).

The ePhoneX will detect the WIFI dongle and automatically enable WLAN.

- A message will pop-up on the phone screen that reads, WLAN adapter is added, scan...
- Press **OK** to start scanning.
- A message will appear on the phone screen that reads, Searching.
- The WLAN menu screen appears.
  - 1. WLAN: Enabled
  - 2. WLAN Status: Disconnected
  - 3. Known Network: No Known Network
  - 4. Available Network: Available Network(s)

There are two methods for configuring Wi-Fi.

## Method 1 (manually enter WIFI credentials):

- If you are not at the WLAN menu, from the phone navigate to Menu > Basic > WLAN.
- Scroll to 3. Known Network and press Enter or OK.
- You are at the **Known Network** screen. Press **Add** to add a network.
- You are now at a screen to Add Network. Enter the following:
  - Toggle **Security Mode** to the desired mode using the Navigation keys
  - Enter SSID
  - Enter WPA Shared Key
- Press **OK**.
- You are now back at the **Known Network** screen. Make sure the desired network is selected and press **Link** if it does not automatically connect.
  - A green check mark ✓ will appear to the right of the network when connected. The home screen will show a Wi-Fi icon in the upper right

If phone fails to connect to WIFI, from the **Known Network** window, go to **Options > 1. Edit**, re-enter Wi-Fi credentials and press **OK**.

• You are not back at the Known Network screen. Press **Link**. If phone still fails to connect, double check Wi-Fi credentials, delete entry and start over.

## Method 2 (select a WIFI network from a list):

- Scroll to 4. Available Network(s) by using the Navigation keys and press Enter or OK.
- Scroll to the desired **Available Network** by using the Navigation keys. If no networks is found, then either your router may need to be configured to broadcast SSID, or the credentials need to be manually entered as explained in Method 1.
- Press Link.
- A message will pop up asking for Wi-Fi Password. Enter Password and press **OK**.
- A green check mark ✓ will appear to the right of the network when connected. The home screen will show a Wi-Fi icon in the upper right.

# Headset

### **Wired Headset**

- The phone supports a wired headset with an RJ9 connector.
- After connecting the headset to the phone, the Headset DSS key will light green.
- The headset answering mode and ring tone can be set by logging into the web interface and going to [Phone settings] >> [Features].

Basic Settings >>			
Enable Call Waiting:		Enable Call Transfer:	
Semi-Attended Transfer:	<b>V</b>	Enable 3-way Conference:	
Enable Auto on Hook:		Auto HangUp Delay:	3 (0~30)second(s)
Ring From Headset:	Disabled 💌	Enable Auto Headset:	
Enable Silent Mode:		Disable Mute for Ring:	

## **EHS Headset**

To enable EHS from the phone, go to [Menu] >> [Features] >> [Advanced] >> [EHS]. Use the left/right navigation keys to toggle EHS from Disabled to Enabled and press OK.

EHS			11:45
1. EHS	Enab	oled	<>
Return	Left	Right	ОК

## **Bluetooth Headset**

The ePhoneX supports a Bluetooth headset via built in Bluetooth. A Bluetooth adapter is not required. When the phone is in the default standby mode,

- From the phone, navigate to Menu > Basic > Bluetooth.
- Use the left/right navigation keys to toggle Bluetooth from Disabled to Enabled.
- Select Scan.
- When the phone finds the headset, select Link.
- When pairing is successful, a Bluetooth icon will appear in the top left corner of the screen **B**.

#### Bluetooth headset usage:

Use the headset key on the phone to answer calls, make calls and disconnect from calls. Or use the on/off hook key on the ESI Bluetooth headset to answer and disconnect calls.

Bluetooth device compatibility

	ePhone3 v2	ePhone4x v2	ePhoneX-1 Built-in BT	ePhone8 Built-in BT	ePhone3	ePhone4x
BT 1.0 & 1.0B	Yes	Yes	Yes	Yes	N/A	N/A
BT 1.1	Yes	Yes	Yes	Yes	N/A	N/A
BT 1.2	Yes	Yes	Yes	Yes	N/A	N/A
BT 2.0	Yes	Yes	Yes	Yes	N/A	N/A
BT 2.1	Yes	Yes	Yes	Yes	N/A	N/A
BT 3.0	Yes	Yes	No	Yes	N/A	N/A
BT 4.0	Yes	Yes	No	Yes	N/A	N/A
BT 4.1	No	No	No	Yes	N/A	N/A
BT 4.2	No	No	No	Yes	N/A	N/A

#### Bluetooth for ESI ePhones – Supported Bluetooth Versions

Note: Bluetooth is backwards compatible. Therefore devices that support BT v4.2 will actually support headsets that use an older BT version. The difference between Bluetooth versions comes down to speed. Therefore the closer the phone and headset BT version are to v4.2 the higher the bandwidth. This allows for faster data with less lag and quicker response times between devices.

# Advanced

## Line Configurations

• From the phone, press [Menu] >> [Advanced] >> [Accounts], select a line account and press OK.

- Select [Basic] and press OK.
- Toggle Registration to Enabled by using the left/right navigation keys.
- Enter account information and press OK to save.

4225		11 : 15
1. Registration	Enabled	0
2. Server Address	172.16.1.2	
3. Auth. User		
4. Auth. Password	*****	
5. SIP User	4225	_
Peturo Le	aft Bight	OK
Return Le	eft Right	ОК

The same can be done from the web portal by going to [Line] >> [SIP].

## **Network Settings**

From the phone, go to [Menu] >> [Advanced] >> [Network] >> [Network].

#### Network

IP Mode

There are 3 network protocol mode options, IPv4, IPv6 and IPv4 & IPv6. Use the left/right navigation keys to select a mode and press OK to save.

WAN Port			15 : 17
1. IP Mode			
2. IPv4			
3. IPv6			
Return	Up	Down	ОК

#### • IPv4

In IPv4 mode, there are 3 connection options: DHCP, PPPoE and Static IP.

When using DHCP mode, phone will get the IP address from DHCP server (router).

- Use DHCP DNS: It is enabled by default. When enabled, phone will get DNS address from DHCP server.
- Use DHCP time: It is disabled by default. When enabled, phone will get DNS address from DHCP server.

Network		15 : 16
1. Connection Mode	DHCP	$\langle \rangle$
2. Use DHCP DNS	Enabled	$\langle \rangle$
3. Use DHCP Time	Disabled	<>
Return Le	ft Rig	ht OK

When using PPPoE, phone will get the IP address from PPPoE server.

- Username: PPPoE user name.
- Password: PPPoE password.

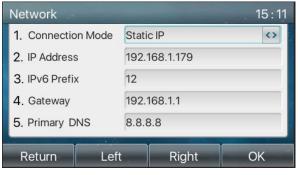

and a	Network			15 : 15
	1. Connection Mode	PPPo	ρE	$\langle \rangle$
	2. Username	user	123	
	3. Password	****	****	
	Return Lef	t	Right	OK

When using Static IP mode, user must configure the IP address manually.

- IP Address: Phone IP address.
- Mask: subnet mask of your LAN.
- Gateway: The gateway IP address.
- o Primary DNS: Primary DNS address. The default is 8.8.8.8, Google DNS server address.
- Secondary DNS: Phone will use secondary DNS when primary DNS is not available.

Network		15 : 14			
1. Connection Mode	Static IP	$\langle \rangle$			
2. IP Address	192.168.1.179				
3. Mask	255.255.255.0				
4. Gateway	192.168.1.1				
5. Primary DNS	8.8.8.8				
Return Lef	t Right	OK			

- IPv6
  - In IPv6, there are 2 connection options, DHCP and Static IP.
  - DHCP: Phone will retrieve IP information from a DHCP server automatically.
  - Static IP: Phone IP information must be configured manually.

#### QoS & VLAN

LLDP

Link Layer Discovery Protocol (LLDP) is a vendor independent link layer protocol used by network devices for advertising their identity, capabilities to neighbors on a LAN segment. Phone can use LLDP to find the VLAN switch or other VLAN devices.

• CDP

CDP (Cisco Discovery Protocol) is a not-for-profit charity that runs the global disclosure system for investors, companies, cities, states and regions to manage their environmental impacts. According to the CDP, Cisco devices can share the OS version, IP address, hardware version and so on.

Parameters	Description
LLDP setting	
Report	Enable or Disable LLDP
Interval	LLDP requests interval time
QoS	
QoS Mode	Enable or Disable QoS, configure SIP DSCP and Audio DSCP
WAN VLAN	
WAN VLAN	Enable or Disable WAN VLAN and configure WAN VLAN
LAN VLAN	
LAN VLAN	Enable or Disable LAN VLAN and configure LAN VLAN
CDP	
CDP	Enable or Disable CDP. Set CDP interval time

#### VPN

Virtual Private Network (VPN) allows the phone to create a tunneling connection to a server and becomes part of the server's network. The network transmission of the phone may be routed through the VPN server.

For some users, especially enterprise users, a VPN connection may need to be established before activating a line of service. The device supports two VPN modes, Layer 2 Transportation Protocol (L2TP) and OpenVPN.

The VPN connection must be configured and started (or stopped) from the device web portal. The phone only supports non-encrypted basic authentication and non-encrypted data tunneling. For users who need data encryption, use OpenVPN.

L2TP

To establish an L2TP connection, log into the phone web portal, and go to [Network] >> [VPN]. In VPN Mode, check the "Enable VPN" option and select "L2TP", then fill in the L2TP server address, Authentication Username, and Authentication Password in the L2TP section. Click Apply. The phone will try to connect to the L2TP server. This can also be done from the phone by going to Menu >> Advanced >> Network >> VPN.

When the VPN connection is established, the VPN IP Address should be displayed in the VPN status. There may be a delay in the connection being established. User may need to refresh the page to update the status.

Once the VPN is configured, the phone will connect with the VPN automatically until user disables it. Sometimes, if the VPN connection does not establish immediately, user can reboot the phone and check if VPN connected after reboot.

- OpenVPN
  - To establish an OpenVPN connection, get the following authentication and configuration files from the OpenVPN hosting provider and name them as follows,

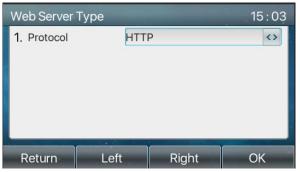

lient.ovpn
a.crt
lient.crt
lient.key

- Log in to the phone web page.
- Go to [Network] >> [VPN] >>[OpenVPN Files], and select OpenVPN Configuration file.
- Upload the files to the phone.
- o Check "Enable VPN"
- Select "OpenVPN" in VPN Mode.
- Click "Apply" to enable OpenVPN connection.

Once configured, the phone will connect with the VPN automatically until user disables it.

#### Web Server Type

Configure the Web Server mode to be HTTP or HTTPS and will be activated after the reboot. Then user could use http/https protocol to access pone web page.

#### **Set Passwords**

Menu Password:

When the phone is in the default standby mode,

Select [Menu] >> [Advanced] >> [Security] >> [Menu Password], enter Current password, New password, Confirm password and press [OK].

Advance setting password default is 123.

Menu password grants permission to access the advanced setting.

Menu Passw	vord		14 : 59
1. Current pa	assword		
2. New pass	word		
3. Confirm p	assword		
Return	123	Delete	OK

Keyboard Password:

Keyboard password is used to unlock the phone once it's locked.

- Select [Menu] >> [Advanced] >> [Security] >> [Keyboard Password].
- Use the left/right navigation keys to toggle Keyboard Status lock to All, Menu or DSSKey.
- Set KeyLock Timout
- Press OK to save.

Keyboard Password				14 : 57
1. Keyboard	Status	Disabled	k	<>
				1
Return	Left		Right	ОК

• Once keyboard lock is set, long press # at the home screen to lock the phone. A lock icon will appear in the top right corner of the screen. Phone will prompt "Enter Password" when any key is pressed.

Parameter	Description
Upgrade server	
Enable Auto Upgrade	If there is a new version txt and new firmware on the server, the phone
	will show a prompt upgrade message after Update Interval.
Upgrade Server Address1	Set available upgrade server address.
Upgrade Server Address2	Set available upgrade server address.
Update Interval	Set Update Interval.
Firmware Information	
Current Software Version	It will show Current Software Version.
Server Firmware Version	It will show Server Firmware Version.
Upgrade button	If there is a new version txt and new firmware on the server, the page will display version information and the upgrade button will become available; Click Upgrade button to upgrade the new firmware.
New Firmware Information	When there is a corresponding TXT file and version on the server side, the TXT and version information will be displayed under the new version description information.

- The file requested from the server is a TXT file called vendor\_model\_hw10.txt.Hw followed by the hardware version number, it will be written as hw10 if no difference on hardware. All Spaces in the filename are replaced by underline.
- The URL requested by the phone is HTTP:// server address/vendor\_Model\_hw10.txt: The new version and the requested file should be placed in the download directory of the HTTP server.
- TXT file format must be UTF-8
- vendor\_model\_hw10.TXT
   Version=1.6.3 #Firmware
   Firmware=xxx/xxx.z #URL, Relative paths are supported and absolute paths are possible, distinguished by the presence of protocol headers.
   BuildTime=2018.09.11 20:00
   Info=TXT|XML

Xxxxx Xxxxx Xxxxx

- Xxxxx
- After the update interval arrives, if the server has available files and versions, the phone will prompt that a firmware upgrade is available. Click OK to view the version information and upgrade.

#### **Factory Reset**

While the phone is in default standby mode:

- Press [Menu] >> [Advanced], enter password and press [OK]. Default password is 123.
- Select [Factory reset].
- Use the left/right navigation keys to select all configurations that are to be factory reset.
- Press [OK] to factory reset phone. The phone will restart automatically after clearing the selected configurations.

# Web Configurations

#### Web Page Authentication

The user can manage the phone from the phone web page. User must have user name and password to log into the web page.

User:	
Password:	
Language:	English 🗸
	Login

#### System >> Information

User can view the system information of the device including,

- Model
- Hardware Version
- Software Version
- Uptime
- Network Mode
- MAC Address
- IP address
- Subnet Mask
- Default Gateway
- SIP User information
- SIP account status (Registered / Unapplied / Trying / Timeout )

#### System >> Account

On this page the user can change the password for the web login page.

Users with administrator rights can also add or delete users, manage users, and set permissions and passwords for new users.

## System >> Configurations

On this page, users with administrator privileges can view, export, or import the phone configuration, or restore the phone to factory Settings.

- Clear Configurations
   Select the module in the configuration file to clear.
   SIP: account configuration.
   AUTOPROVISION: automatically upgrades the configuration
   TR069:TR069 related configuration
   MMI: MMI module, including authentication user information, web access protocol, etc.
   DSS Key: DSS Key configuration
   Output
   Description
   Output
   Description
   Description<
- Clear Tables Select the local data table to be cleared. All tables are selected by default.
- Reset Phone The phone data will be cleared, including configuration and database tables.

## System >> Upgrade

Upgrade the phone software version, customized ringtone, background, DSS Key icon, etc. Ring tone support ".wav" format.

#### System >> Auto Provision

The Auto Provision settings help IT manager or service provider to easily deploy and manage the phones in mass volume. For Auto Provision details, refer to **Auto Provision**.

## System >> Tools

Tools provided in this page help users to identify and troubleshoot issues. Refer to **Trouble Shooting** for more detail.

#### System >> Reboot Phone

Restart the phone without factory resetting.

#### Network >> Basic

This page allows users to configure network connection types and parameters.

The default network priority is Wi-Fi.

The current device supports coexistence of Wi-Fi and Ethernet, and users can log in to the web page with any configured network address.

Example, Wi-Fi access IP is 172.16.19.19 and Ethernet access IP is 172.16.7.116.

Net Global Network Priority:	Wi-Fi 💌	Apply
Net Type Ethernet		
Network Mode		
Network Mode:	IPv4 Only	
IPv4 Network Status		
IP:	172.16.7.116	
Subnet mask:	255.255.255.0	
Default gateway:	172.16.7.1	
MAC:	00:a8:59:fd:14:cd	

#### Network >> Service Port

This page provides settings for Web page login protocol, protocol port settings and RTP port.

Service Port Settings		
Web Server Type:	HTTP 🗸	
Web Logon Timeout:	15	(10~30)Minute
web auto login:		
HTTP Port:	80	
HTTPS Port:	443	
RTP Port Range Start:	10000	(1025~65530)
RTP Port Quantity :	1000	(10~1000)
		Apply

Parameter	Description
Web Server Type	Reboot is required for this option to take effect after settings. Optionally, the
web Server Type	web page login is HTTP/HTTPS.
Web Logon Timeout	Default is 15 minutes. The timeout will automatically log out the user.
Web auto login	After the timeout, user does not need to enter a user name password.
HTTP Port	Default is 80. User can set ports other than 80 for better security.
	Such as :8080, webpage login: HTTP://ip:8080
HTTPS Port	Default is 443.
RTP Port Range Start	The value range is 1025 to 65530. The value of the RTP port starts from the
RIF FUIL Range Start	initial value set. For each call, the value of voice and video port adds 2.
RTP Port Quantity	Number of calls.

## Network >> VPN

Users can configure a VPN connection on this page. Refer to **VPN** section for more details.

#### Network >> Advanced

Advanced network Settings are typically configured by the IT administrator to improve the quality of the phone service. For configuration, go to phones Advanced Settings.

#### Line >> SIP

Configure Line service on this page. Select a line then configure its parameters listed below.

Parameters	Description
Register Settings	
Line Status	Displays the current line status at page loading. To get the up to date
	line status, user must refresh the page manually.
Activate	Select to activate the line
Username	Enter the username of the service account.
Authentication User	Enter the authentication user of the service account
Display Name	Enter the display name to be sent in a call request.
Authentication Password	Enter the authentication password of the service account
Realm	Enter the SIP domain if requested by the service provider
Server Name	Input server name.
SIP Server 1	
Server Address	Enter the IP or FQDN address of the SIP server
Server Port	Enter the SIP server port, default is 5060
Transport Protocol	Set up the SIP transport line using TCP, UDP or TLS.
Registration Expiration	Set SIP expiration date.
SIP Server 2	
Server Address	Enter the IP or FQDN address of the SIP server
Server Port	Enter the SIP server port, default is 5060
Transport Protocol	Set up the SIP transport line using TCP, UDP or TLS.
Registration Expiration	Set SIP expiration time in seconds.
Proxy Server Address	Enter the IP or FQDN address of the SIP proxy server.
Proxy Server Port	Enter the SIP proxy server port, default is 5060.
Proxy User	Enter the SIP proxy user.
Proxy Password	Enter the SIP proxy password.
Backup Proxy Server Address	Enter the IP or FQDN address of the backup proxy server.
Backup Proxy Server Port	Enter the backup proxy server port, default is 5060.
Basic Settings	
Enable Auto Answering	When enabled, the incoming calls will be answered automatically after the delay time
Auto Answering Delay	Set the delay for incoming call before the call is automatically answered
	When enabled, all incoming calls will be forwarded to the number
Call Forward Unconditional	specified in the next field
Call Forward Number for Unconditional	Set the number of unconditional call forward
Call Forward on Busy	Enable call forward on busy, when the phone is busy, any incoming call will be forwarded to the number specified in the next field.
Page 83 of 107	0455-0317 Rev I

Call Forward Number for Busy	Set the number of call forward on busy.
Call Forward on No Answer	Enable call forward on no answer, when an incoming call is not answered within the configured delay time, the call will be forwarded to the number specified in the next field.
Call Forward Number for No Answer	Set the number of call forward on no answer.
Call Forward Delay for No Answer	Set the delay time before an un-answered gets forwarded.
Transfer Timeout	Set the timeout of call transfer process.
Conference Type	Set the type of call conference. Local=set up call conference by the device itself. Supports two remote parties maximum, Server=set up call conference by dialing to a conference room on the server
Server Conference Number	Set the conference room number when conference type is set to Server
Subscribe For Voice Message	Enable the device to subscribe a voice message waiting notification, if enabled, the device will receive notification from the server if there is voice message waiting on the server
Voice Message Number	Set the number for retrieving voice message
Voice Message Subscribe Period	Set the interval of voice message notification subscription
Enable Hotline	Enabling hotline configuration, the device will dial to the specific number immediately at audio channel opened by off-hook handset or hands-free speaker or headphone
Hotline Delay	Set the delay for hotline before the system automatically dials
Hotline Number	Set the hotline dialing number
Dial Without Registered	Set call out by proxy without registration
Enable Missed Call Log	If enabled, the phone will save missed calls to the call history record.
DTMF Type	Set the DTMF type to be used for the line
DTMF SIP INFO Mode	Set the SIP INFO mode to send '*' and '#' or '10' and '11'
Enable DND	Enable Do-not-disturb. Any incoming call to this line will be rejected
Subscribe For Voice MessageEnable the device to subscribe a voice message waiting notificat enabled, the device will receive notification from the server if the voice message waiting on the server	
Use VPN	Enable to allow the line to use VPN route
Use STUN	Set the line to use STUN for NAT traversal
Enable Failback	Enable this option to switch back to primary server when it is available.
Failback Interval	A Register message is used to periodically detect the time interval for the availability of the main Proxy.
Signal Failback	Multiple proxy cases, whether to allow the invite/register request to also execute failback.
Signal Retry Counts	The number of attempts that the SIP Request considers proxy unavailable under multiple proxy scenarios.
Codecs Settings	Set the priority and availability of the codecs by adding or removing them from the Enabled Codecs list.
Video Codecs	Select video codec to use for video.
Advanced Settings	
	When this setting is enabled, the features in this section will not be handled by the device itself but by the server instead. In order to control
Use Feature Code	the enabling of the features, the device will send feature code to the server by dialing the number specified in each feature code field.

Disable DND	Set the feature code to dial to the server			
Enable Call Forward	Set the feature code to dial to the server			
Unconditional				
Disable Call Forward	Set the feature code to dial to the server			
Unconditional				
Enable Call Forward on	Set the feature code to dial to the server			
Busy				
Disable Call Forward on	Set the feature code to dial to the server			
Busy				
Enable Call Forward on No	Set the feature code to dial to the server			
Answer				
Disable Call Forward on No	Set the feature code to dial to the server			
Answer				
Enable Blocking	Set the feature code to dial to the server			
Anonymous Call				
Disable Blocking	Set the feature code to dial to the server			
Anonymous Call				
Call Waiting On Code	Set the feature code to dial to the server			
Call Waiting Off Code	Set the feature code to dial to the server			
Send Anonymous On Code	Set the feature code to dial to the server			
Send Anonymous Off Code	Set the feature code to dial to the server			
SIP Encryption	Enable SIP encryption such that SIP transmission will be encrypted			
RTP Encryption	Enable RTP encryption such that RTP transmission will be encrypted			
Enable Session Timer	Enable the call session timer. The call session will end if there is no new			
	session timer event update received after the timeout period			
Session Timeout	Set the session timer timeout period			
Enable BLF List	Enable/Disable BLF List			
BLF List Number	BLF List allows one BLF key to monitor the status of a group. Multiple			
BEI EIST Number	BLF lists are supported.			
Response Single Codec	If enabled, the phone will use a single codec in response to an incoming			
Response olingie obdee	call request			
	The registered server will receive the subscription package from			
	ordinary application of BLF phone.			
BLF Server	Enter the BLF server, if the sever does not support subscription			
	package, the registered server and subscription server will be			
	separated.			
Keep Alive Type	Set the line to use dummy UDP or SIP OPTION packet to keep NAT			
	pinhole opened			
Keep Alive Interval	Set the keep alive packet transmission interval			
Keep Authentication	Keep the authentication parameters from previous authentication			
Blocking Anonymous Call	Reject any incoming call that does not present caller ID			
User Agent	Set the user agent, the default is Model number and Software Version.			
Specific Server Type	Set the line to collaborate with specific server type			
SIP Version	Set the SIP version			
Anonymous Call Standard	Set the standard to be used for anonymous calls			
Local Port	Set the local port			
Ring Type	Set the ring tone type for the line			
Ring Type Enable user=phone	Set the ring tone type for the line Sets user=phone in SIP messages.			
Enable user=phone	Sets user=phone in SIP messages.			

Enable Rport	Set the line to add Rport in SIP headers			
Enable PRACK	Set the line to support PRACK SIP message			
DNS Mode	Select DNS mode, A, SRV, NAPTR			
Enable Long Contact	Allow more parameters in contact field per RFC 3840			
	Enables the use of strict routing. When the phone receives packets from			
Enable Strict Proxy	the server, it will use the source IP address, not the address in via field.			
Convert URI	Convert not digit and alphabet characters to %hh hex code			
Use Quote in Display				
Name	Adds quotes in display name, i.e. "123" vs 123			
Enable GRUU	Support Globally Routable User-Agent URI (GRUU)			
Sync Clock Time	Time Sync with server			
	With the post-call hold capture package enabled, you can see in the			
Enable Inactive Hold	INVITE package that SDP is inactive.			
Caller ID Header	Set the Caller ID Header			
Use 182 Response for Call	Sat the device to use 182 response code at call waiting response			
waiting	Set the device to use 182 response code at call waiting response			
Enable Feature Sync	Feature Sync with server			
Enable SCA	Enable/Disable SCA (Shared Call Appearance)			
CallPark Number	Set the CallPark number.			
Server Expire	Set the timeout to use the server.			
TLS Version	Choose TLS Version.			
uaCSTA Number	Set uaCSTA Number.			
Enable Click To Talk	With the use of a special server, click to call out directly after enabling.			
Flash mode	Chose Flash mode, normal or SIP info.			
Flash Info Content-Type	Set the SIP info content type.			
Flash Info Content-Body	Set the SIP info content body.			
PickUp Number	Set the scramble number when Pickup is enabled.			
JoinCall Number	Set JoinCall Number.			
Intercom Number	Set Intercom Number.			
Unregister On Boot	Select to enable logout function.			
Enable MAC Header	Open user registration with IP package and user agent MAC.			
Enable Register MAC	Open user agent registration with MAC.			
Header				
BLF Dialog Strict Match	Whether to enable accurate matching of BLF sessions.			
PTime(ms)	Set Ptime field interval			
SIP Global Settings				
Strict Branch	Set to strictly match the Branch field.			
Enable Group	Set to enable group.			
Enable RFC4475	Set to enable RFC4475.			
Enable Strict UA Match	Enable strict UA matching.			
Registration Failure Retry	Set the registration failure retry time.			
Time				
Local SIP Port	Set the local SIP port.			

# Line >> SIP Hotspot

Refer to **SIP Hotspot** section.

#### Line >> Dial Plan

#### **Basic Settings**

1	Press # to invoke dialing	
	Dial Fixed Length	to Send
<b>V</b>	Send after10	second(s)(3~30)
	Press # to Do Blind Transfer	
	Blind Transfer on Onhook	
	Attended Transfer on Onhook	
	Attended Transfer on Conference	Onhook
	Enable E.164	
		Apply

Parameters	Description
Press # to invoke dialing	The user dials the other party's number and then adds the # number
	to dial out
Dial Fixed Length	The number entered by the user is automatically dialed out when it
Diai i ixed Length	reaches a fixed length
Timeout dial	The system dials automatically after timeout
Press # to Do Blind Transfer	The user enters the number to be transferred and then presses the
	"#" key to transfer the current call to a third party
Blind Transfer on Onhook	After the user enters the number, hang up the phone to transfer the
	current call to a third party.
Attended Transfer on Onhook	Hang up the phone when other end answers to transfer the current
Allended Hansler on Onnook	call to a third party.
Attended Transfer on	During a three-way call, hang up the phone and the remaining two
Conference Onhook	parties remain on the call.
Enable E.164	Refer to E.164 standard specification

#### Add dialing plan:

Digit Map:		0					
Apply to Call	Outgoing Call 💌	0	Match to Send:	No 🖵 🕜			
Line:	SIP DIALPEER	<b>•</b>	Destination:		0	Port:	0
Alias(Optiona	al): No Alias 💌 🕜		Phone Number:		0	Length:	0
Suffix:		0					-
				Add			
	0						
Plan Option (			Delete	Modify			
Plan Option			Delete	Piodity			
	l Plan Table 🕜						

Parameters	Description			
	There are two types of matching: Full Matching or Prefix Matching. In Full matching,			
	the entire phone number is entered and then mapped per the Dial Peer rules.			
Dial rule	In prefix matching, only part of the number is entered followed by T. The mapping			
	with then take place whenever these digits are dialed. Prefix mode supports a			
	maximum of 30 digits.			
Note: Two different special characters are used.				
x Matches any single digit that is dialed.				
[] Specifies a range of numbers to be matched. It may be a range, a list of ranges separated by				
commas, or a list of digits.				
Destination	Set Destination address. This is for IP direct.			
Port	Set the Signal port. Default is 5060 for SIP.			
Alias	Set the Alias. This is the text to be added, replaced or deleted.			
Note: There are four types of aliases.				
all: xxx – xxx will replace the phone number.				
add: xxx – xxx will be dialed before any phone number.				
del –The characters will be deleted from the phone number.				
rep: xxx – xxx will be substituted for the specified characters.				
Suffix	Characters to be added at the end of the phone number. It is an optional item.			
Length	Set the number of characters to be deleted. For example, if this is set to 3, the			
Length phone will delete the first 3 digits of the phone number. It is optional.				

This feature allows the user to create rules to make dialing easier. There are several different options for dial rules. The examples below will show how this can be used.

Example 1: All Substitution -- Assume that it is desired to make a direct IP call to IP address 172.168.2.208. Using this feature, 123 can be substituted for 172.168.2.208.

Index	Digit Map	Call	Match to Send	Line	Alias Type:Number(length)	Suffix	Media
1	"123"	Out	No	SIP DIALPEER(172.16.1.15:5560)			Default

User-defined Dial Plan Table 🕜

Example 2: Partial Substitution -- To dial a long distance call requires dialing area code 010 before the local phone number. Using this feature 1 can be substituted for 010. For example, to call 62213123 would only require dialing 162213123 instead of 01062213123.

User	-defined	Dial Plan Ta	ble 🕜				
	Index	Digit Map	Call	Match to Send	Line	Alias Type:Number(length)	Suffix Media
	1	"1T"	Out	No	ESI@SIP1	rep:010(1)	Default

Example 3: Addition -- Two examples are shown. In the first case, it is assumed that 0 must be dialed before any 11 digit number beginning with 13. In the second case, it is assumed that 0 must be dialed before any 11 digit number beginning with 135, 136, 137, 138, or 139. Two different special characters are used.

x -- Matches any single digit that is dialed.

[] – Brackets specify a range of numbers to be matched. It may be a range, a list of ranges separated by commas, or a list of digits.

#### Line >> Action Plan

1. When an IP phone calls a phone, the bound IP camera synchronously transmits video to the other phone.

2. When SIP calls, multicast calls or intercom calls are made, the device converts calls that conform to the number rules into group calls.

Parameter	Description
Number	Auxiliary phone number (support video)
Туре	Support video display on call.
Direction	For call mode, incoming/outgoing call displays video
Line	Set up outgoing lines.
Username	Bind the user name of the IP camera.
Password	Bind IP camera password.
URL	Video streaming information; Mcast Address
URL	(mcast://IP:port)
User Agent	Set user agent information

### Line >> Basic Settings

Set up the register global configuration.

Parameters	Description
STUN Settings	
Server Address	Set the STUN server address
Server Port	Set the STUN server port, default is 3478
Binding Period	Set the STUN binding period which can be used to keep the NAT pinhole
Binding Penda	opened.
SIP Waiting Time	Set the timeout of STUN binding before sending SIP messages
SIP P2P Settings	
Enable Auto Answering	Set phone to auto answer an incoming call after auto answer delay time
Auto Answering Delay	Set the delay time
DTMF Type	Set DTMF type
DTMF SIP INFO Mode	Set to send 10/11 or */#
Enable Preview	Enable preview
Preview Mode	Set preview type
Use VPN	Select to use VPN

#### *Line >> RTCP-XR*

RTCP-XR mode is based on RFC3611 (RTP Control Extended Report), which can measure and evaluate network packet loss, delay and voice quality by sending RTCP-XR packets.

Parameters	Description
VQ RTCP-XR Settings	
VQ RTCP-XR Session Report	VQ report on whether session mode is enabled or not.
VQ RTCP-XR Interval Report	Whether to turn on Interval mode for VQ report sending.
Period for Interval Report(5~99)	The time interval at which VQ reports are sent periodically.
Warning threshold for Moslq(15~40)	When the phone calculated the Moslq value x10 below the set
	threshold, a warning is issued.
Critical threshold for Moslq(15~40)	When the phone calculates the Moslq value x10 below the set
Childar threshold for Mosid(13-40)	threshold, the critical report is issued.
Warning Threshold for	When the one-way delay of the phone is greater than the set
Delay(10~2000)	threshold, warning is issued.
Critical Threshold for Delay(10~2000)	When the phone computes that the one-way delay is greater
Childar Threshold for Delay(10-2000)	than the set threshold, the critical report is issued.
Display Report options on phone	Whether to display VQ report data for the last call through the
Display Report options on phone	phone.
Display Report Options on web	Whether to display the VQ report data for the last call through
Display Report Options on web	the web page.

# Phone settings >> Features

Configuring phone features.

Parameters	Description
Basic Settings	
Enable Call Waiting	Enable this setting to allow user to take second incoming call during an established call. Default enabled.
Enable Call Transfer	Enable Call Transfer.
Semi-Attended Transfer	Enable Semi-Attended Transfer
Enable 3-Way Conference	Enable 3-way conference
Enable Auto On hook	The phone will hang up and return to idle automatically after call
Auto HangUp Delay	Specify Auto Onhook time delay, the phone will hang up and return to idle automatically after call
Ring from Headset	Enable Ring from Headset by selecting it, the phone plays ring tone from headset.
Auto Headset	Enable this feature to enable headset auto answer.
Enable Silent Mode	When enabled, the ring volume is muted. User can use the volume keys and mute key to unmute.
Disable Mute for Ring	When enabled, user cannot mute the phone
Enable Default Line	If enabled, user can assign default SIP line for dialing out rather than SIP1.
Enable Auto Switch Line	Enable phone to select an available SIP line as default automatically
Default Ext Line	Select the default line to use for outgoing calls
Ban Outgoing	When enabled, user cannot dial out to any number.
Hide DTMF	Configure the hide DTMF mode.
Enable CallLog	Select whether to save the call log.
Enable Restricted Incoming List	Enable restricted call list.
Enable Allowed Incoming List	Enable the allowed call list.
Enable Restricted Outgoing List	Enable the restricted allocation list.
Enable Country Code	When selected, the country code is enabled.
Country Code	Enter the country code.
Area Code	Enter the area code.
Enable Number Privacy	Enable number privacy.
Match Direction	Matching direction. There are two rules, from right to left and from left to right.
Start Position	Enable number privacy after the start of the defined position.
Hide Digits	Turn on number privacy to hide the number of digits.
Allow IP Call	If enabled, user can dial out with IP address
P2P IP Prefix	Prefix a point-to-point IP call.
Caller Name Priority	Change caller ID display priority.
Emergency Call Number	Set Emergency Call Number. This number can be dialed even when the keyboard is locked. Dial the number and press the dial key.
Search path	Select the search path for contacts.
LDAP Search	Select an LDAP for searching contacts
Restrict Active URI Source IP	Set the device to accept Active URI command from specific IP address.
Push XML Server	Configure the Push XML Server, when phone receives request, it will

	determine whether to diaplay corresponding content on the phase
	determine whether to display corresponding content on the phone which is sent by the specified server.
	Disabled. User enters number and audio channel will open
	automatically.
Enable Pre-Dial	Enabled. User enters number without opening audio channel
	automatically.
	If enabled, up to 10 simultaneous calls can exist on the phone. If
Enable Multi Line	disabled, up to 2 simultaneous calls can exist on the phone.
Line Display Format	Custom line format: Options are SIPn, SIPn: xxx, xxx@SIPn
Contact As White List Type	Options are NONE, BOTH, DND White List, FWD White List
Block XML When Call	Disable XML push on call.
SIP potify	When enabled, the phone displays the information when it receives the
SIP notify	relevant notify content.
Tone Settings	
Enable Holding Tone	When enabled, a tone plays when call is on hold
Enable Call Waiting Tone	When enabled, a tone plays when a call is waiting to be answered
Play Dialing DTMF Tone	Play DTMF tones on the phone when dialing digits. Default enabled.
Play Talking DTMF Tone	Play DTMF tone on the phone when user presses digits during talking.
	Default enabled.
DND Settings	
DND Option	Select an option to take effect on the line, on the phone, or off.
Enable DND Timer	Enable DND Timer, If enabled, DND is automatically turned on from
	the start time to the off time.
DND Start Time	Set DND Start Time
DND End Time	Set DND End Time
Intercom Settings	
	When intercom is enabled, the phone will accept the incoming call
Enable Intercom	request with a SIP header of Alert-Info instruction to automatically
<b>F</b> 11 1 <i>i</i> <b>i i</b> <i>i</i> <b>i</b> <i>i i i i i i i i i i</i>	answer the call after a delay.
Enable Intercom Mute	Enable mute mode during the intercom call
Enable Intercom Tone	If the incoming call is an intercom call, the phone will play an intercom tone
Enable Intercom Barge	The phone auto answers the intercom call during a call. If the current call is intercom call, the phone will reject the second intercom call.
Redial settings	
Enable Call Completion	Enable call completion
Enable Auto Redial	Redial the last number dialed automatically
Auto Redial Interval	Set a time interval to redial
Auto Redial Times	Set a number of times to attempt redial
Redial enter CallLog	Enter redial attempts into the call log
Response Code Settings	
DND Response Code	Set the SIP response code on call rejection while DND is enabled
Busy Response Code	Set the SIP response code on line busy
Reject Response Code	Set the SIP response code on call rejection
Password Dial Settings	
	Enable Password Dial by selecting it. When the number that is entered
	begins with the password prefix, the following N numbers after the
Enable Password Dial	password prefix will be hidden as *. N stand for the value which was
	enter in the Password Length field. Example: Set the password prefix
	to 3, enter the Password Length to 2, then enter the number 34567, it
	will display 3**67 on the phone.

Encryption Number Length	Configure the Encryption Number length
Password Dial Prefix	Configure the prefix of the password call number
Bluetooth Settings	
Enable Bluetooth	Enable Bluetooth
Power LED	
Common	Standby power lamp state. Off when set to off. On is always bright red. Off by default.
	This sets the status of power lamp when there is unread short
SMS / Voice mail	message/voice message. Options are off/on/slow blink/fast blink. Default is slow blink.
Missed call	This sets the state of the power lamp when there is a missed call. Options are off/on/slow blink/fast blink. Default is slow blink.
Talk/Dial	The power lamp options are off and on. Off is off. On is always bright red. Default is off.
Ringing	Power lamp status when there is an incoming call, including off/on/slow blink/fast blink. Default is fast blink.
Mute	Power lamp status in mute mode, including off/on/slow flash/quick flash, off by default.
Hold/Held	The power lamp states are off/on/slow blink/fast blink. Default is off.
DssKey Settings	Set the BLF LED status and Line LED status. Options are on/off/slow blink/fast blink.
Notification Popups	
Display Missed Call Popup	Display a popup when a call is missed. Popup shows the number of missed calls.
Display MWI Popup	Display a popup when there is a message waiting. Popup shows the number of messages waiting.
Display Device Connect Popup	Display a popup when a Wi-Fi dongle is plugged into phone USB port.
Display SMS Popup	Display a popup when an SMS message is waiting to be read.
Display Other Popup	Display a popup when the handset is not fully set on cradle, when registration fails, when IP acquisition fails, when TR069 connection fails, and other abnormalities.

# Phone settings >> Media Settings

Change voice Settings.

Parameters	Description
	Select voice codec:
Codecs Settings	G.711A/U,G.722,G.729, G.726-16,G726-24,G726-32,G.726-40,
	G.723,ILBC,Opus
Video Codecs	Select a video codec
Media Settings	·
Handset Volume	Set the Handset volume to 1~9
	Configure default ringtones. If no special ringtone is set for the phone
Default Ring Type	number, the default ringtone will be used.
Speakerphone Volume	Set the hands-free volume to 1-9.
Headset Ring Volume	Set the volume of the headset ringtone to 1~9.
Headset Volume	Set the volume of the headset to 1~9.
Speakerphone Ring Volume	Set the volume of hands-free ringtone to 1~9.
G.723.1 Bit Rate	5.3kb/s or 6.3kb/s is available.
DTMF Payload Type	Enter the DTMF payload type, the value must be 96~127.
Headset Mic Gain	Set the MIC gain to fit different models of headsets.
Opus Payload Type	Set Opus load type, range 96~127.
	Set Opus sampling rate, including opus-nb (8KHz) and opus-wb
OPUS Sample Rate	(16KHz).
ILBC Payload Type	Set the ILBC Payload Type, the value must be 96~127.
ILBC Payload Length	Set the ILBC Payload Length
	When there is a new voice message, the phone will start a special dial
Enable Voice Mail Tone	tone.
Enable VAD	Enable or disable voice activity detection.
Onhook Time	Configure a minimum response time
EHS Type	EHS headset is available after enabling.
Video Bit Rate	Set video bit rate
Video Frame Rate	Set video frame rate
Video Resolution	Set video resolution
H.264 Payload Type	Set payload. Values must be between 96~127
<b>RTP Control Protocol(RTCP)</b>	Settings
CNAME user	Set CNAME user
CNAME host	Set CNAME host. Local IP address is set as the default
RTP Settings	
RTP keep alive	Hold the call and send the packet after 30s
•	Forward an RTP stream from a source to either a multicast or multiple
RTP Relay	unicast destinations
Alert Info Ring Settings	
Value	Set the value to specify the ring type.
Line	Set which line to assign the value
Ring Type	Select a ring type value to None, Default, or 1 through 7

## Phone settings >> MCAST

This feature allows user to a broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. User can also configure the phone to receive an RTP stream from pre-configured multicast listening address without involving SIP signaling. User can specify up to 10 multicast listening addresses.

Parameters	Description
Priority	Define the priority of the active call, 1 is the highest priority, 10 is the lowest.
Enable Page Priority	The voice call in progress shall take precedence over all incoming paging calls.
Name	Listened multicast server name
Host: port	Listened multicast server's multicast IP address and port.
Channel	Select a channel that m multicast group will join
MCAST Dynamic	Set an expire time

#### Phone settings >> Action

#### Action URL Event Settings

Action URL's are used for IPPBX systems to submit phone events.

## Phone settings >> Time/Date

The user can configure the time Settings of the phone on this page.

Parameters	Description
Network Time Server Settings	
Time Synchronized via SNTP	Enable time-sync through SNTP protocol
Time Synchronized via DHCP	Enable time-sync through DHCP protocol
Primary Time Server	Set primary time server address
	Set secondary time server address, when primary server is not
Secondary Time Server	reachable. The phone will try to connect to secondary time server to
	get time synchronization.
Time Zone	Select the time zone
Resync Period	Time of re-synchronization with time server
12-Hour Clock	Set the time display in 12-hour mode
Time/Date Format	Select the time/date display format
Daylight Saving Time Settings	
Location	Choose your location. Phone will set daylight saving time
Location	automatically based on the local
DST Set Type	Choose DST Set Type. If Manual, user will need to set the daylight
Der Get Type	savings start time and end time.
	Daylight saving time rules are based on specific dates or relative
Fixed Type	rule dates for conversion. Display in read-only mode in automatic
	mode.
Offset	Set the offset minutes when DST starts
Month start	The DST start month
Week start	The DST start week
Weekday start	The DST start weekday
Hour(s) start	The DST start hour
Month end	The DST end month
Week end	The DST end week
Weekday end	The DST end weekday
Hour(s) end	The DST end hour
Manual Time Settings	Set time manually

*Phone settings >> Time plan* This page allows user to set a time reboot, upgrade or forward the phone.

#### Phone settings >> Tone

This page allows users to configure a phone prompt.

User can either select the country area or customize the area. If the area is selected, it will display the following information directly. If Custom is selected, user can modify the button tone, call back tone and other information.

Select Your Tone:	United States	-
Dial Tone:	350+440/0	
Ring Back Tone:	440+480/2000,0/4000	
Busy Tone:	480+620/500,0/500	
Congestion Tone:		
Call waiting Tone:	440/300,0/10000,440/300,0/10000,0/0	
Holding Tone:		
Error Tone:		
Stutter Tone:		
Information Tone:		
Dial Recall Tone:	350+440/100,0/100,350+440/100,0/100,350+440/100,0/100,350+440/0	
Measage Tone:		
Howler Tone:		
Number Unobtainable Tone:	400/500,0/6000	
Warning Tone:	1400/500,0/0	
Record Tone:	440/500,0/5000	
Auto Answer Tone:		

#### *Phone settings >> Advanced*

User can configure the advanced configuration settings on this page.

- Screen Configuration.
  - Enable screensaver
  - o Backlight level
  - o Backlight Time
- Power Saving Enable or disable power saving mode. Disabled by default.
- LCD Menu Password Settings.
   Set a Menu password. The password is 123 by default.
- UI Preference Customize the colors of the user interface.
- Keyboard Lock Settings.
- Greeting Words

The greeting message will display on the top left corner of the LCD screen when the phone is idle, which is limited to 16 characters.

#### Phonebook >> Contact

User can add, delete, or edit contacts in the phonebook in this page. User can browse the phonebook and sort it by name, phone, or filter contacts by group.

To add a new contact, enter contact information and click "Add".

To edit a contact, click on the checkbox in front of the contact, the contact information will be copied to the contact edit boxes. Click "Modify" after editing the information.

To delete one or multiple contacts, check the checkbox in front of the contacts to be deleted and click "Delete", or click "Clear" to clear the contacts from the phonebook.

Add multiple contacts into a group by selecting the group in the dropdown options in front of "Add to

Group" at the bottom of the contact list. Select contacts with checkbox and click "Add to Group" to add selected contacts into the group.

Similarly, user can select multiple users and add them into blacklist by clicking "Add to Blacklist".

## Phonebook >> Cloud phonebook

#### Cloud Phonebook

User can configure up to 8 cloud phonebooks. Each cloud phonebook must be configured with an URL where an XML phonebook is stored. The URL may be based on HTTP/HTTPs or FTP protocol with or without authentication. If authentication is required, user must configure the username and password. To configure a cloud phonebook, enter the following information,

- Phonebook name (required)
- Phonebook URL (required)
- Authentication name (optional)
- Authentication password (optional)

#### LDAP Settings

The cloud phonebook allows user to retrieve contact list from a LDAP Server through LDAP protocols. User must configure the LDAP Server information and Search Base to be able to use it on the phone. If the LDAP server requests an authentication, user should also provide username and password. To configure a LDAP phonebook, the following information should be entered,

- Display Title (required)
- Server Address (required)
- Server Port (required)
- Search Base (required)
- Username (optional)
- Password (optional)

**Note!** Refer to the LDAP technical documentation before creating the LDAP phonebook and phonebook server.

#### Web page preview

After setting up the XML VoIP directory or LDAP,

- Select [Phone book] >> [Cloud phone book] >> [Cloud phone book] to select the type.
- Click the drop down list to select XML/LDAP and download the contact for browsing.

Cloud	Cloud phonebook									
XML	✓ XML1 XML2 X	KML3 XML4 BACK								
Add to	Add to phonebook       Add to Blocked List       Add to Allowed List       Previous       Page:        Next

## Phonebook >> Call List

- Restricted Incoming Calls: This is similar to a blacklist. Add the number to the blacklist, and the user will no longer receive calls from the stored number until the user removes it from the list. Users can add specific Numbers to the blacklist or add specific prefixes to the blacklist to block calls with all Numbers with this prefix.
- Allowed Incoming Calls:
   When DND is enabled, the incoming call number can still be called.
- Restricted Outgoing Calls:

Adds a number that restricts outgoing calls and cannot be called until the number is removed from the table.

#### Phonebook >> Web Dial

Use web pages for dial, answer, and hang up operations.

#### Phonebook >> Advanced

Users can export the local phone book in XML, CSV, and VCF format and save it on the local computer. Users can also import contacts into the phone book in XML, CSV, and VCF formats.

**Attention!** If the user imports the same phone book repeatedly, the same contact will be ignored. If the name is the same but the number is different, the contact is created again.

Users can delete groups or add new groups on this page. Deleting a contact group does not delete contacts in that group.

## Call Logs

The user can browse the complete call record in this page. The call record can be sorted by time, call number, contact name or line, and the call record can be screened by call record type (incoming call, outgoing call, missed call, forward call).

The user can also save the number in the call record to his/her phone book or add it to the blacklist/whitelist.

Users can also dial the web page by clicking on the number in the call log.

Users can also download call records conditionally and save them locally.

## Function Key >> Function Key

One-key transfer Settings: establish new call, blind transfer, attention-transfer, one-key three-party, Play DTMF.

Parameters	Description
Memory Key	<ul> <li>BLF (New Call/BXFE /AXFER): It is used to prompt user the state of the subscribe extension, and it can also pick up the subscribed number, which help user monitor the state of subscribe extension (idle, ringing, a call). There are 3 types for one-touch BLF transfer method.</li> <li>p.s. User should enter the pick-up number for specific BLF key to fulfill the pick-up operation.</li> <li>Presence: Compared to BLF, the Presence is also able to view whether the user is online.</li> <li>Note: You cannot subscribe the same number for BLF and Presence at the same time Speed Dial: You can call the number directly which you set. This feature is convenient for you to dial the number which you frequently dialed.</li> <li>Intercom: This feature allows the operator or the secretary to connect the phone quickly;</li> </ul>
Line	it is widely used in office environments. It can be configured as a Line Key. User is able to make a call by pressing Line Key.
Key Event	User can select a key event as a shortcut to trigger. For example: MWI / DND / Release / Headset / Hold / etc.
DTMF	It allows user to dial or edit dial number easily.
URL	Open the specific URL directly.
Multicast	Configure the multicast address and audio codec. User presses the key to initiate the multicast.
Action URL	The user can use a specific URL to make basic calls to the phone.
XML browser	Users can set the DSS Key for specific URL download and other operations.

## Function Key >> Side Key

For Side Key function and settings, please refer to Function Key.

#### Function Key >> Softkey

The User Settings mode and display style, display page.

Parameter	Description

	Video/Audio/DSS Key

#### Function Key >> Advanced

• Global Key Settings

Select the function of the memory key while on a call. Selections are None, Call Hold, and Hangup. The configured memory key has a call path. If the global configuration is maintained, pressing the memory key again will maintain the call path. If configured to hang up, pressing the memory key again will hang up the call.

Global Key Settings	
Select MemoryKey Action:	None 💌 🥝
	Apply

• Programmable key Settings

The navigation keys can be programmed to perform other functions. The keys can be set to perform a different function from the Desktop, Dialer, while in call, or with a long press. Select a function from the drop down list and click Apply.

IP Camera List

IP Camera List								
		Index	IP Camera	Username	Password	Preview	Dsskey	
				Refresh	Apply			

#### Application >> Manage Recording

Manage audio recordings. Refer to **Record** for details of recording.

#### Security >> Web Filter

The user can set up a configuration management phone that allows only devices with a certain network segment IP access.

Start IP Address	End IP Address	Option
eb Filter Table Settings		
Start IP Address	End IP Address	Add
Veb Filter Setting		
Enable Web Filter 🔲	Apply	
Web Filter Table 🜒		
Start IP Address	End IP Address	Option
192.168.1.1	192.168.254.254	Modify Delete

Add and remove IP segments are accessible. Configure the starting IP address within the start IP, end the IP address within the end IP, and click [Add] to submit and to take effect. A large network segment can be set, or it can be divided into several network segments to add. If the user wants to delete, select the initial IP of the network segment to be deleted from the drop-down menu, and then click [Delete] to take effect.

Enable web page filtering: configure enable/disable web page access filtering; Click the Apply button to take effect.

Note: If the device you are accessing is in the same network segment as the phone, do not configure the filter segment of the web page to be outside your own network segment. Otherwise you will not be able to log in the web page.

## Security >> Trust Certificates

Set whether to open license certificate and general name validation, select certificate module. Upload and delete uploaded certificates.

Permission Certificate	2

## Security >> Firewall

Firewall Type								
Enable In	put Rules: 🔲			Enable Outpu	ıt Rules: 🔲			
			Apply					
Firewall Input Rule Table								
Index Deny/Permit Protocol	Src Address	Src Mask	Src Port Range	Dst Address	Dst Mask	Dst Port Range		
Firewall Output Rule Table								
Index Deny/Permit Protocol	Src Address	Src Mask	Src Port Range	Dst Address	Dst Mask	Dst Port Range		
Firewall Settings								
Input/Output Input 🗸 Sr	c Address		Dst Ad	dress				
Deny/Permit Deny 💌 S	Grc Mask		Dst M	ask		Add		
Protocol UDP 💌 Src	Port Range		- Dst Port	Range	-			
Rule Delete Option								
Input/Output	Input 💌	Ir	ndex To Be Delete	d		Delete		

The user can set whether to enable the input through this page, output firewall and set the firewall input and output rules. Using these Settings can prevent some malicious network access, or restrict internal user's access to some resources of the external network, which can improve security. Firewall rule set is a simple firewall module. This feature supports two types of rules, input rules and output rules. Each rule is assigned an ordinal number, allowing up to 10 for each rule. Considering the complexity of firewall Settings, the following is an example to illustrate:

Parameter	Description
Enable Input Rules	Indicates that the input rule application is enabled.
Enable Output Rules	Indicates that the output rule application is enabled.
Input/Output	To select whether the currently added rule is an input or output rule.
Deny/Permit	To select whether the current rule configuration is disabled or allowed;
Protocol	There are three types of filtering protocols: TCP   UDP   ICMP.
Src Port Range	Filter port range
	Source address can be host address, network address, or all addresses
Src Address	0.0.0.0; It can also be a network address similar to *.*.*.0, such as:
	192.168.1.0.
	The destination address can be either the specific IP address or the full
Dst Address	address 0.0.0.0; It can also be a network address similar to *.*.*.0, such as:
	192.168.1.0.
	This is the source address mask. When configured as 255.255.255.255, it
Src Mask	means that the host is specific. When set as 255.255.255.0, it means that a
	network segment is filtered.
	This is the destination address mask. When configured as 255.255.255.255, it
Dst Mask	means that the host is specific. When set as 255.255.255.0, it means that a
	network segment is filtered.

After setting, click [Add] and a new item will be added in the firewall input rule, as shown in the figure below:

Fire	irewall Input Rule Table 🥑								
	Index D	eny/Permit	Protocol	Src Address	Src Mask	Src Port Range	Dst Address	Dst Mask	Dst Port Range
	1	deny	udp	192.168.1.0	192.168.1.154	0-9	255.255.255.0	255.255.255.0	0-9

Then click [Apply].

In this way, when the device is running: ping 192.168.1.118, the packet cannot be sent to 192.168.1.118 because the output rule is forbidden. However, the other IP of the ping 192.168.1.0 network segment can still receive the response packet from the destination host normally.

Rule Delete Option 💡			
Input/Output	Input <b>v</b>	Index To Be Deleted	Delete

Select the list you want to delete and click [Delete] to delete the selected list.

#### Device Log >> Device Log

When an abnormal problem is encountered, user can collect the device log and use the log to diagnose a problem. Refer to **Get Log Information** section.

# **Trouble Shooting**

The user can try the following methods to restore normal operation to the phone or collect relevant information.

## Get Phone System Information

Users can view phone information from the phone by pressing the [Menu] >> [Status]. The following information will be provided:

Network information.

Phone information: Model, software and hardware version, etc.

Account: Is the line registered, attempting to register, etc.

#### **Reboot Phone**

Reboot the phone from the phone by going to [Menu] >> [Basic] >> [Reboot System]. Confirm the action by pressing [OK]. An alternative method is to unplug phone power, wait 30 seconds then plug it back in.

#### Reset Phone to Factory Default

Resetting phone to Factory Default will erase all of the user's configuration, preference, database and profiles and restore the phone back to factory default.

To perform a factory reset, press [Menu] >> [Advanced]. Input the password to enter the interface, then choose [Factory Reset] and press [OK]. The phone will reboot to a clean factory default state.

#### Screenshot

If there is a problem with the phone, a screenshot may help identify the problem. To obtain screen shots, log into the phone webpage and go to [System] >> [Tools], and click Save BMP to capture an image of the main screen.

Packet Capture	
Start	stop
Screenshot	
Main Screen:	Save BMP
Watch Dog	
Enable Watch Dog:	Apply

#### Network Packets Capture

Sometimes it is helpful to capture the network packets of the phone for issue identification. To capture network packets of the phone, log in the phone web portal, go to [System] >> [Tools] >> [Packet Capture] and click [Start]. A pop-up message will ask user to save the capture file. User will then duplicate the issue then click [Stop] when done. The network packets will be saved to a file for analysis.

Packet Capture Start	stop	
Screenshot		
Main Screen:	Save BMP	
Watch Dog		
Enable Watch Dog:	$\checkmark$	
	Apply	

#### Get Log Information

Log information is helpful when encountering an exception problem. In order to get the log information of the phone, log in the phone web page and go to [Device Log]. Click the [Start], duplicate the issue, click [End], and [Save] the file for analysis of the problem.

Trouble Case	Solution	
Phone will not boot up	The phone is powered by an external power supply via power adapter or by a PoE switch. Use the power adapter provided by ESI or a PoE switch that meets power requirements and check if device is well connected to power source. If "POST MODE" appears on phone screen, the phone system image is damaged.	
Phone will not register to a service provider	Check if phone is well connected to the network. The network Ethernet cable should be connected to the $\blacksquare$ [Network] port, NOT the $\blacksquare$ [PC] port. If the cable is not well connected to the network, the icon $\square$ , [WAN disconnected] will be flashing in the middle of the screen. Check if the device has an IP address. Check system information, if the phone displays "Negotiating", the phone does not have an IP address. Check if the network configurations are correct. If network connection is good, check line configurations again. If all configurations are correct, contact support for assistance.	
No Audio or Poor Audio in Handset	Check that handset is connected to handset ( ) port and NOT headset ( ) port. Network bandwidth and delay may not be suitable for audio call at the moment.	
Poor Audio or Low Volume in Headphone	There are two Headset wiring types on the market. Verify that the headset you are using is compatible. Network bandwidth and delay may be not suitable for audio call at the moment.	
Audio is chopping at far-end in Hands- free speaker mode	This is usually due to loud volume feedback from speaker to microphone. Lower the speaker volume until the chopping goes away.	

#### Common Trouble Cases
